Highlights

The Moelven Group had a satisfactory start to the year 2012, with good operating conditions, good demand in several markets and improved profitability. After a positive start to the year, the market sentiment turned at the end of the first half of the year when there was growing macroeconomic uncertainty in Europe and the US. The second half of the year was marked by a negative development in many of the Group's export markets. In addition, the appreciation of the Scandinavian currencies against the euro reduced our competitiveness on the export markets and increased competition in our home markets. In spite of the challenging market conditions, especially for the export-oriented sawmills in the Timber Division and the building wood manufacturers in the Wood Division, the volume and market shares have been maintained at a satisfactory level. The profitability fell nevertheless significantly. The main reasons were a reduction in the margin between the raw material and finished product prices for industrial timber, price pressure on volume products to the Norwegian building materials trade, and losses related to individual projects in the Building Systems Division. The business areas Building Modules, System Interiors and Glulam improved their results compared with last year. The Wood Division achieved a satisfactory result when the market conditions are taken into consideration. The operating profit for the year for the Group as a whole was NOK 16.9 million (NOK 12.9 million), and the net loss for the year of NOK 36.2 million (loss of NOK 85.8 million) was not satisfactory. The total assets and equity changed little compared with the previous year and ended the year at NOK 4,342.1 million (NOK 4,333.9 million) and NOK 1,543.6 million (NOK 1,540.0 million), respectively.

At the start of 2013, there are several ongoing improvement measures to adapt the Group to the changed market conditions and to improve profitability, at the same time as the price situation in some of the finished product markets and raw material markets is showing an improvement.

Events in 2012

Corporate governance

Grete Sønsteby was elected as a new board member to replace Elisabeth Bjøre in April. Ole Helge Aalstad (42) from Hamar became the Managing Director of Moelven Timber in the third quarter. Aalstad has a degree in agronomy and is a mechanical engineer with specialisation in wood engineering. He was formerly a director at Moelven Våler AS. He has been a director at Moelven Løten AS, Moelven Eidsvold Værk AS and Moelven Mjøsbruket AS, and he has worked in the Moelven Group since 2000.

Corporate structure

Full production started at the new MDF plant Moelven Lovene AB in January. The plant produces MDF ceiling and wall panels for the Regina range, which was previously manufactured by subcontractors. The plant has 9 employees.

In 2012 a number of shareholders in Moelven Granvin Bruk AS have accepted the offer from Moelven Industrier ASA to buy shares. As a result of this, the Group's ownership interest in Moelven Granvin Bruk AS increased from 87.95 to 99.23 per cent.

On 31 July 2012, Moelven Industrier ASA acquired all of the shares in Mjøscon AS, which owned 15.5 per cent of the shares in Moelven Iso3 AS. After the acquisition, Moelven owns all of the shares in Moelven Iso3 AS.

Moelven Utvikling AS, in which Moelven had an ownership interest of 70 per cent, merged with Tretorget AS. Moelven's ownership interest in the merged company is 26.5 per cent.

In Sweden the Group increased its ownership interest in Vänerbränsle AB from 77.8 to 82.32 per cent through Moelven Industrier AB.

Products and market

Moelven Limtre AS supplied glulam structures to the Vennesla Library and Cultural Centre, which was awarded the prestigious architecture prize Statens Byggeskikkpris 2012 early in June. In the opinion of the jury, the building represents an encounter between technological and architectural innovation, and contributes to development of the local area and good public spaces.

Moelven Limtre AS also supplied glulam to the New Tretten Bridge, which was open to traffic on 15 June. Because of the way steel was used in combination with glulam, the bridge is the most complicated that has ever been delivered by the company.

Moelven ByggModul AB delivered its first project on Åland. A day care centre consisting of 18 modules with a total floor space of 800 m² was assembled at Mariehamn in June. The day care centre can accommodate 100 children and consists of four divisions and a commercial kitchen. It took four weeks to manufacture the modules at the factory, while it took six weeks to assemble the modules at the building site. At the end of August, the new student housing in Bakkenteigen at Vestfold University College was completed and ready to accommodate students. The project was delivered by Moelven ByggModul AS and consists of 100 student housing units. This cost-effective construction method provides good and economically favourable solutions for both students and student welfare organisations.

THIS IS THE MOELVEN GROUP

Ownership structure

The Moelven Group is owned by Glommen Skog BA (25.1%), Eidsiva Vekst AS (23.8%), Agri MI AS (15.8%), Viken Skog BA (11.9%), Mjøsen Skog BA (11.7%), AT Skog BA (7.3%) and Havass Skog BA (4.0%). Most of the remaining 0.4 per cent is owned by private individuals.

Vision

Moelven is a Scandinavian company, with all its production units located in Scandinavia. Scandinavia is also Moelven's main market. The business is based on the prerequisites dictated by Scandinavian society and builds on these. Moelven's vision is *to be the natural choice for people who wish to build and live Scandinavian*, and the Group shall take the lead in developing buildings that are based on Scandinavian building traditions. Within this framework, activities are based on a desire and an ability to contribute to creating good spaces – good environments to live and work in, and for all social functions. Environments that are well designed and functional, that are safe and at the same time inspiring. Good Scandinavian environments are often close to nature in their form and content. Wood and other natural materials are essential parts of what Moelven makes and are dominant in the greater part of the product range. Natural materials are environmentally friendly alternatives to other building materials and solutions when it comes to houses and modules, bridges and interior products.

Location

The Group has its headquarters in Moelv in Norway and consists of 52 production units and 33 offices for sales, service and fitting. Most of the production units are companies and workplaces with a strong local presence in rural communities in South East Norway and the western part of Central Sweden. The offices for sales, service and fitting are located in larger population centres around Norway, Sweden, Denmark, the United Kingdom, Germany and the Netherlands. Production in Norway and Sweden is of approximately the same volume, but the Swedish units export a greater proportion of their production than the Norwegian. Out of a total of 3,375 employees at the end of 2012, 1,769 work in Norway, 1,578 in Sweden, 21 in Denmark and 11 in other countries.

Divisions

Moelven offers a wide range of building products and building systems and associated services. The Scandinavian market accounts for 80 per cent of sales revenues, and 85 per cent of the Group's products and services are used for new building or renovation of homes and commercial property. A large part of the remaining operation consists of sales of biomass for biofuel and for pulp, paper and particle board production. The Group also supplies wood products to the furniture, interior and packaging sectors. Customers are divided into three main segments: industry, trade and projects. These segments are based on the nature of their business, purchasing routines and service and distribution needs. The Group is divided into three divisions: Timber, Wood and Building Systems, each of which focuses on one of the main segments. There is also an Other Businesses reporting area, which consists of the holding companies, supply businesses and bioenergy companies.

Timber

The Timber division consists of 15 production units and 4 sales offices, supplying industrial timber, components and chip products made from local spruce and pine. The customers are mainly industrial companies that buy intermediate products for their own production of construction timber, panels, flooring, mouldings, windows, packaging, board and paper products and for bioenergy. About 60 per cent of operating revenues come from Scandinavian customers. At the end of 2012, there were 696 (692) employees, 248 (243) of them in Norway, 440 (441) in Sweden and 8 (8) in other countries.

Wood

The Wood division consists of 20 production units and 3 customer centres. The main products are white and impregnated building wood, mouldings, floorings, interior and exterior panels, boards, components and chip products. Wood also sells products produced by other companies. Almost 80 per cent of production is sold through the building goods trade. Wood is one of the leading suppliers to the Scandinavian market and about 96 per cent of its operating revenues come from Scandinavian customers. At the end of 2012, there were 1,063 (1,114) employees, 611 (633) of them in Norway, 431 (439) in Sweden and 21 (42) in Denmark.

Building Systems

The Building Systems division consists of 8 production units and 33 sales, service and fitting offices. Building Systems is divided into the business areas Glulam, Building Modules and System Interiors, all three of which are market leaders in Norway and Sweden, as well as Electrical Services in Norway. The division's building and contracting customers buy customised building modules, flexible interior solutions systems and associated services, advanced glulam structures

and electrical installation services. In addition to bridges and load-bearing structures, the glulam unit also has considerable sales of standard laminated timber beams through the building products trade, as well as components for the prefabricated house industry. About 99 per cent of operating revenues come from Scandinavian customers. At the end of 2012, there were 1,486 (1,542) employees, 862 (866) of them in Norway, 624 (672) in Sweden and 4 (4) in the United Kingdom.

Other businesses

Other businesses include the parent company Moelven Industrier ASA and the common services HR and Communications, ICT, as well as economics, finance and insurance. Timber supply and sales of chips and energy products are included through the companies Moelven Skog AB, Moelven Virke AS and Vänerbränsle AB. Moelven Bioenergi AS is also included. At the end of 2012, there were 130 (143) employees, 47 (51) of them in Norway and 83 (83) in Sweden.

SOCIAL RESPONSIBILITY

Social responsibility is about how business takes account of their impact on various stakeholder groups including customers, competitors, employees, suppliers, communities, governments and the environment. Moelven operates many different types of activity in many different local communities, where the Group's companies are often cornerstone companies. In addition to creating value for our owners, the Group's activities create value for the local community – as employer, taxpayer and buyer of local goods and services. The Group plays therefore an important role in helping to create vigorous businesses, rural communities, towns and regions. The activities also have environmental consequences, both for the employees who are directly involved, but also for the external environment. Relations with employees and the effect on the environment are described in a separate section.

Group's brand platform is determined by the Board and is the highest governing tool for coordinating operations and for the administration of social responsibility. This shall form the basis for the Group's actions and communication, both internally and externally. At Moelven, working with social responsibility means integrating social and environmental considerations in strategy and day-to-day operations. The brand platform specifies the following core values for the Group's business activities:

Sustainability

Moelven has respect for both people and the environment. We base our activities on renewable resources and have turned sustainability and the long-term view into our competitive advantage. We have a strong desire to take responsibility for our environment.

Reliable

You can trust Moelven. We deliver on time and to the right quality. There is a strong focus on openness and honesty – being able to admit to weaknesses and mistakes is the basis for progress and trust.

Seeking opportunities

Moelven seeks solutions. The Group has the ability and resources to be a leader in product development and creativity. We wish to always be a leading company and to make use of the opportunities we are given over time.

The following guidelines have been formulated based on the overall brand platform:

- HSE Handbook
- Moelven's environmental policy
- Insurance and risk strategy - general insurance
- Staff regulations
- Policy for an open company culture
- Dealing with internal irregularities
- Policy on alcohol and drugs
- Data discipline instructions
- Policy for social media
- Brand and communication strategy
- Legislation on competition in a Moelven context
- Guidelines for transfer pricing between companies

OPERATING REVENUES AND RESULTS

The Board expected a continued good level of activity and improved results for 2012, compared with the previous year. A weaker than expected market development for the mechanised wood part of the Group in the second half of the year and losses on certain major projects in the Building Systems Division are the primary reasons why the operating result ended up at the same level as in 2011.

Timber

Amounts in NOK million	2012	2011
Operating revenue	2 428.2	2 394.1
Depreciation and impairment	99.9	90.3
Operating profit	-74.6	-52.4
Profit before tax	-98.0	-78.1

The Timber Division showed a positive development throughout the first half of the year. The level of activity in the European market was still low, but the delivery volumes were higher than the same period in 2011. This was attributed primarily to the fact that the lack of activity in Europe was compensated for by an increasing level of activity in North Africa and the Middle East. The finished product prices were lower than the previous year throughout the year, partly due

to the market conditions and partly due to the strong appreciation of SEK against EUR. In the first half of the year, the lower processing costs, after the internal improvement measures and reduced timber prices, contributed nevertheless to improved results. Throughout the second half of the year, however, the market conditions became increasingly more challenging, with low demand and falling prices. The Norwegian and Swedish markets have been affected less by the economic downturn than the European markets. Combined with the foreign exchange conditions, this has resulted in ever growing volumes that were previously sold on the export markets remaining in the Swedish market and resulting in increased price competition here as well. The supply of sawn timber has been satisfactory, but competition in the raw material markets has contributed to the timber prices not following the fall in the finished product prices. At the same time, there has been a surplus of chip products in the market, and the prices have fallen due, for example, to the after effects of the mild winter last year. The worsening general conditions in the second half of the year made it necessary to implement further savings measures and production limitations. Towards the end of the year, the timber prices also felt somewhat. At the end of the year, the situation was still very difficult, especially for the export-oriented Swedish units. An intensive effort is being made to implement savings and efficiency measures throughout the entire division, and this, combined with lower raw material costs, will partially compensate for the lower gross margins.

In September the new wood plane at Moelven Tom Heurlin AB was hoisted into place at the newly-built production facility. The investment will make Moelven Tom Heurlin AB one of Europe's most modern planing mills. Commissioning started in the fourth quarter, and the planned takeover will take place in the first quarter of 2013.

Wood

Amounts in NOK million	2012	2011
Operating revenue	2 836.9	2 932.4
Depreciation and impairment	99.1	89.5
Operating profit	29.6	57.6
Profit before tax	0.8	29.6

The year 2012 turned out to be the same in the Wood Division as it was in the Timber Division, with a positive first half year and falling demand combined with increasing competition in the home markets in the second half of the year. The companies in the Wood Division, however, are less exposed to the export markets than the Timber units, and are therefore affected at a later point in time by the economic downturn caused by the debt crisis in Europe. The level of activity in the Danish building material market has been weak throughout the entire year, and measures to adapt the business to the current level were implemented in the first quarter. The level of

activity in the renovation and remodelling markets in Norway and Sweden, and the level of new building activity in Norway have been satisfactory. The level of new building activity in Sweden has fallen throughout the year and was at a very low level at the end of the year. This situation has clearly affected the demand for building wood. For products with a higher degree of processing, such as interior products and surface treated products, the demand has been satisfactory. The seasonal increase in market activity that normally takes place after the summer holidays was somewhat less than usual in 2012. In addition, the competition has been increasing due to the volume of products that have been redirected to Scandinavia from markets that have become less attractive in the wake of economic developments in Europe. The prices have therefore been falling in the second half of the year, particularly in the Norwegian market. Overall for the year, the delivery volumes have been somewhat lower than last year, and the prices have been somewhat lower for some of the product range. The timber-consuming units within the Wood Division are facing the same challenges as the sawmills within Timber regarding the imbalance between raw material and finished product prices, in addition to weaker prices for wood chip products. The operating conditions have been good, and operations have continued satisfactorily. In conjunction with implemented efficiency measures and synergies from acquisitions, this has led to a reduction in unit costs which partially compensates for the weaker market prices. Efforts to adapt the operations to the lower level of activity in the market will continue in 2013. In May the Board decided to make a major investment in Moelven Vänerply AB, which was acquired by the Moelven Group in June 2011. This investment, which will be the largest investment since the factory was built in the 1970s, entails a modernisation of a major portion of the manufacturing process and an improvement in productivity. The investment started in the summer of 2012, and technical completion will be in the autumn of 2013. Two new channel driers were built and commissioned at Moelven Soknabruket AS in 2012.

Building Systems

Amounts in NOK million	2012	2011
Operating revenue	2 799.3	2 665.8
Depreciation and impairment	38.1	36.0
Operating profit	97.0	50.8
Profit before tax	98.9	55.3

The Building Systems Division has primarily Norway and Sweden as its market. The division has had a more stable level of activity than Timber and Wood in recent years. In general, however, the market has had the same development throughout the year as the two other divisions. The year started with a satisfactory level of activity and good construction activity as a result of favourable weather conditions. As the year progressed, the market conditions for the Swedish units became more challenging. The hesitant attitude in

the market has entailed fewer contracts for new projects than expected. The order backlog is nevertheless satisfactory and normal for the division as a whole. The companies in the division have maintained their market positions in challenging markets with stiff competition. Capacity adjustments and measures to raise efficiency are being implemented nevertheless throughout the entire division to adapt the operations to the prevailing general conditions.

In the building module business, Sweden delivered better results in 2012 than the previous year, however, the level activity was falling in certain segments at the end of the year. The business in Norway showed a positive development at the same time, with the signing of several large contracts for the delivery of modules to student housing and apartments.

The building furnishing companies also delivered better results than in 2011, in spite of the weak market in Sweden. Both the Norwegian and Swedish parts of the business have over time adapted their capacity and cost levels to the challenging market conditions, and, combined with good operations and project management, this is the main reason for the improvement.

While major portions of the electrical business have had good profitable operations, there have been losses in connection with certain major, long-term and complex projects in the Oslo area. Combined with the nonrecurring costs associated with winding up operations in Sweden, this is the main reason for the negative result. Extensive measures were implemented in 2012 to improve cost control, project management and scale down project operations. The other parts of the company will continue. Due to the falling level of construction activity in Sweden, the Swedish glulam business has experienced more challenging market conditions than the Norwegian business. The business on the Norwegian side has felt increased competition from foreign entities and a somewhat falling level of activity, but there has nevertheless been a satisfactory level of activity in the plant.

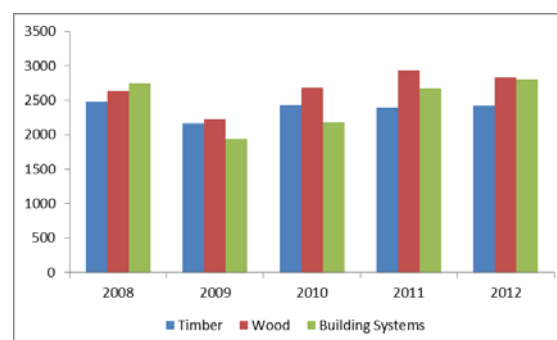

Moelven Töreboda AB installed a new CNC-controlled processing machine in June that will give added capacity. This investment also makes all types of adaptations to the laminated wood beams that are manufactured possible, such as drilling holes, cutting and milling. Earlier such adaptations have often represented production bottlenecks. Now that these bottlenecks have been eliminated, our delivery reliability will increase.

Other businesses

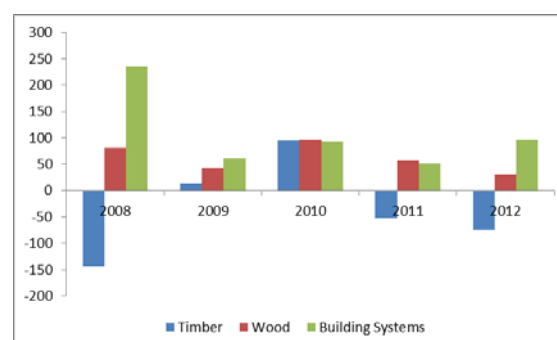

Amounts in NOK million	2012	2011
Operating revenue	2 616.7	2 677.2
Depreciation and impairment	13.8	10.0
Operating profit	-35.1	-43.0
Profit before tax	-66.1	-119.2

Variability in revenues in this area is largely due to changes in revenues from sales of sawn timber from Moelven Skog AB and Moelven Virke AS to the Group's timber-consuming units. These internal sales do not have a material effect on the income statement for this business area. The improvement in the operating result for the year is due to lower costs for other common services.

Operating revenues, amounts in NOK million:

Operating profit, amounts in NOK million:

INVESTMENTS, BALANCE SHEET AND FINANCING

Investments made during the year total NOK 386.6 million (NOK 258.4 million). The investment activity in 2012 is linked primarily to the upgrading and maintenance of the existing operations. In 2011 the plywood manufacturer Vänerply AB and the window component manufacturer H Profil AS were acquired in the second and fourth quarters, respectively. The acquisition of Vänerply AB led to an increase in fixed assets of NOK 39 million. The acquisition of H Profil AS in the fourth quarter led to a corresponding increase of NOK 33 million.

At year end, the Group's total assets were reported as NOK 4,342.1 million (NOK 4,333.9 million).

Cash flow from operating activities was NOK 197.6 million (NOK 266.4 million), corresponding to NOK 1.5 per share (NOK 2.1). This reduction is attributed to the development of the cash flow from working capital items. The cash flow from profit and loss items in

isolation improved in 2012. The changes in the working capital items cannot be attributed to any large individual items, and lie within the scope of natural variation in relation to the size of the Group.

Net interest-bearing liabilities was NOK 1,211.3 million (1,086.9 million) at year end and the liquidity reserve was NOK 492.3 million (615.8 million). The increase in net interest-bearing liabilities is attributed to normal variations in the working capital. Financial leases are included in net interest-bearing liabilities in the amount of NOK 41.9 million (NOK 54.1 million). To ensure the Group's financial flexibility during a period of seasonally high levels of working capital, i.e. the second and third quarters, a loan agreement was entered into in March that increased the available liquidity by NOK 200 million. The loan was repaid as stipulated at the end of the agreement period. The Group's financing is based on syndicated loan agreements with a negative security declaration and covenants relating to key figures from the balance sheet. At the end of the year the key figures were well within the requirements of the loan agreements.

At the end of the year, the equity was NOK 1,543.6 million (NOK 1,540.0 million). This corresponds to NOK 11.91 (11.98) per share and an equity ratio of 35.9 per cent (35.6).

The Annual General Meeting on 24 April 2012 granted the Board the authority to increase the company's share capital by a maximum of NOK 178,570,000 in connection with listing the company. Authority was also granted to acquire a maximum of 12,954,128 treasury shares. These authorities have been included in their entirety in the report on corporate governance. It has not been relevant to exercise these authorities in 2012. Part of the Group's equity is connected with ownership of foreign subsidiaries, mainly in Sweden, and is therefore exposed to fluctuations in the exchange rate. Most of equity is hedged against exchange rate fluctuations by having the financing in Swedish krona. Because of the long-term nature of the ownership, as well as the extent and consequences of probable exchange rate fluctuations being within acceptable limits, it is acceptable that part of equity is not hedged for exchange rate fluctuations. Rate fluctuations in 2012 have led to an unrealised equity reduction of NOK 12.6 million (NOK 0.5 million).

New guidelines and prerequisites for the calculation of pension liabilities were issued in the fourth quarter. The most important change in relation to earlier calculations is the opportunity to use the market interest rate for covered bonds as a basis for the discount rate. The government bond rate was used previously as the basis.

For the Moelven Group, the new prerequisites have reduced the estimated pension liabilities by NOK 64.8 million. This change does not have any impact on the cash flow.

RISK

The Group's profits and balance sheet are affected by several external factors that can be influenced by Moelven to a greater or lesser extent.

For some of the risk areas that affect the Group, there are functioning financial markets where the risk of fluctuations can be reduced. This applies, for example, to interest rates, exchange rates and electricity. The Group's

position on financial risk is that it is the industrial activities rather than financial transactions that shall create the conditions necessary for profitability. The main aim of the guidelines for the use of financial instruments is to reduce fluctuations and create more predictability. In other areas, such as raw materials, finished goods and projects, other methods of hedging risk must be used. As far as possible, fixed price contracts or index linking of contracts is used, for example. The Group's organisation also has a risk-reducing effect, in that different units are aimed at different markets. These are seldom affected at the same time by economic fluctuations, while at the same time the cost side can still benefit from economies of scale. The organisational philosophy, with a flat organisational and management structure and a great deal of delegation of responsibility, has enabled the Group to react quickly when changes have occurred and necessary measures have been introduced at an early date.

Prices of finished goods

The units of the Moelven Group operate in markets with free competition and many players. Price formation therefore occurs freely in the marketplace, and, assuming unchanged volumes, will affect the Group as shown in the sensitivity table.

Sawn timber prices

In 2012, the Group produced and processed 4.2 million cubic metres of sawn spruce and pine at a value of about NOK 2,250 million, including transport costs. Spruce and pine account for approximately equal portions of the round timber. Moelven does not own any forest, but buys all its timber from external suppliers. These suppliers are in turn dependent on functioning markets within an acceptable transport distance, as well as satisfactory price levels for both sawn timber and pulpwood. The cost of timber is by far the biggest single cost for the Group, and changes in timber prices have an immediate and substantial impact on margins. This involves both a price risk and a volume risk. The Group therefore focuses on entering into price agreements that as far as possible correlate timber prices with documented changes in the price of finished goods.

Prices of chips and biomass

The price of cellulose chips and biomass, which come from saw and planing production in Timber and Wood, is of great significance for the Group's revenues. Even though work is constantly going on to improve the

utilisation of raw material, only about half of each log becomes industrial timber after passing through a sawmill. The remaining half is made up of bark, shavings, cellulose chips and biomass. Part of this is used for our own energy production, while the rest is sold to the particle board, bioenergy and paper industries. Since a change in the profit margin for these products has a direct influence on the Group's results, the distance to the customers and access to efficient logistics solutions for road and rail transport are of great importance.

Electricity prices

The price of electric power is another important factor that affects the Group's profitability. About 185 GWh of electric power a year is bought via the Group's electricity suppliers on the Nasdaq OMX exchange. According to the Group's finance policy, the need for electric power shall be secured against price fluctuations so as to ensure stability and predictability. The anticipated power requirement is hedged within stated maximum and minimum levels by forward buying on Nasdaq OMX with a 5 year maximum horizon.

Interest rate risk

The Group's net interest-bearing debt is subject to interest rate risk. The bulk of the debt in SEK, which is why interest rates in Sweden are most important for the development of the Group's interest expense. The Group companies will be financed with loans from the parent company. All external borrowing is done by the parent company, which also makes hedging in accordance with financial policy. The hedging instruments that can be used are ordinary interest rate swaps, FRAs and composite swaps of types that are normally used for such purposes. The extent of hedging is measured in terms of the combined duration of outstanding debt and hedging arrangements. The combined duration shall be between 12 and 36 months. No interest rate hedging agreements shall be entered into over more than 10 years.

Exchange rate risk

About 20 per cent of the Group's operating revenues come from markets outside Scandinavia and carry exchange rate risks. Both raw materials and finished goods are also imported into Norway from Sweden. The most important currency crosses are EUR/SEK, SEK/NOK and EUR/NOK. Moelven uses forward contracts to counteract large cash flow fluctuations as a result of variations in exchange rates. Because of the hedging strategy that has been chosen, changes must be long-term so as to have the full effect on the Group's profitability, and during the hedging period operational adaptations may be made to compensate for the external changes. During the hedging period operational adaptations may be made to compensate for the external changes. About half of the Group's total balance sheet is connected to activities in Sweden. The

balance sheet figures will therefore be affected by the prevailing exchange rate between the Swedish and Norwegian kroner. The equity is partially hedged against this by financing the share investments in most of the Group's Swedish subsidiaries in Swedish krona. At the end of 2012, the total equity that is exposed to exchange rate risk amounted to SEK 603 million (SEK 741 million).

Credit risk

It is the Group's policy that credit sales over a certain size shall be secured in the form of either guarantees or credit insurance. In practice, credit insurance is used most. There are internal guidelines and follow-up routines for unsecured sales, which only occur when no other security is possible.

Liquidity risk

The Group's foreign capital financing consists of two long-term credit facilities with ceilings of NOK 1,050 million, which expires in May 2015, and NOK 300 million, which expires in May 2016. The loan agreements include normal default clauses with regard to equity, net equity value and debt ratio. As at 31 December 2012, the Group's key figures were better than the levels at which the default clauses are triggered. In addition to the long-term credit facilities, the Group also has available credit in its banking systems, amounting altogether to about NOK 300 million, which is renewed annually.

Risk of damage and interruption to production

The Group has a centralised function for managing industrial insurance. A policy has been developed for insurance that all companies shall follow. This policy gives guidelines for insurance cover, preventive measures, risk review and preparation of continuity plans. The continuity plans become key plans if a fire/damage should occur. The plans cover immediate efforts, disaster management and the ability to continue deliveries to customers. Through its industrial insurance, the Group is covered for financial loss exceeding NOK 3 million per individual claim. At the start of the fourth quarter there was an outbreak of fire in the dry sorting line at Moelven Valåsen AB in Karlskoga. The fire was quickly brought under control, and was extinguished without any personal injuries. All fire procedures were followed, and the sprinkler system installed in the sawmill worked as it should. The interruption of operations in the affected parts of the facility was limited to one and a half days. The incident demonstrates that the systematic work that has been undertaken in recent years to improve safety at the facility has yielded results.

Risk of loss of reputation

Moelven places great emphasis on maintaining a good reputation. This is measured regularly using a brand survey that is conducted by external partners. There is financial risk linked to any loss of Moelven's reputation. The reputation risk is not quantified. Openness is what

characterises the way the Group relates outwardly to society and the media and inwardly to employees of the Group. This applies whether it concerns positive or negative circumstances for Moelven, in line with Moelven's brand platform.

Risk of loss of environmental costs

The activities of the Moelven Group follow the prevailing legislation and regulations with regard to emissions and waste management. The Group has made provisions in the accounts for all known obligations in connection with environmental protection. The purpose of the Group's environmental policies is to minimize the risk of negative impact on the natural environment and thus the potential environmental cost as well.

HUMAN RESOURCES

The Group's human resources ideal is to "Provide opportunities for people with the drive to succeed". This ideal establishes guidelines for the Group's objectives in terms of which persons are recruited, what expertise is demanded, what pay and working conditions are offered, how new employees are introduced, what development and career opportunities are offered and how downsizing is handled.

Employees

The number of employees declined from 3,482 to 3,375 in 2012. This reduction is attributed to capacity adaptations and rationalisation through investments in new production equipment.

Employees	2012			
	Men	Women	% women	Total
Timber	614	82	13.4 %	696
Wood	890	173	19.4 %	1063

Other	98	32	32.7 %	130
Total	2987	388	11.50 %	3375

Employees	2011			Total
	Men	Women	% women	
Timber	600	92	15.3 %	692
Wood	936	178	19.0 %	1114
Building Systems	1435	107	7.5 %	1542
Other	104	30	28.8 %	134
Total	3075	407	11.69 %	3482

Recruitment and personal development

Moelven acts strategically in both internal and external recruitment. Competent employees are vital to the Group's competitive ability and it is important that Moelven is an attractive employer.

Moelven focuses on long-term employment relationships and strives to offer its employees the opportunity to develop in their jobs. Motivated and competent employees are encouraged to take their personal development further.

Equality of opportunity

Moelven wishes to increase the proportion of women in the Group. However, most of those who complete education in the trades and professions the Group needs in its industrial activities are men. Often, when jobs are advertised, no women apply. There are however female managers at most levels within the organisation.

Within the activities of the Moelven Group, there shall not be any differential treatment on account of gender, ethnic origin, national origin, descent, skin colour, language, religion or philosophy. Job descriptions, areas of responsibility, expertise and work effort form the basis for determining pay, promotion and recruitment.

In registering needs, Moelven shall facilitate conditions so as to avoid possible discrimination. Other than the low percentage of women, no need for introducing measures in the area of discrimination and equal opportunity was identified in 2012.

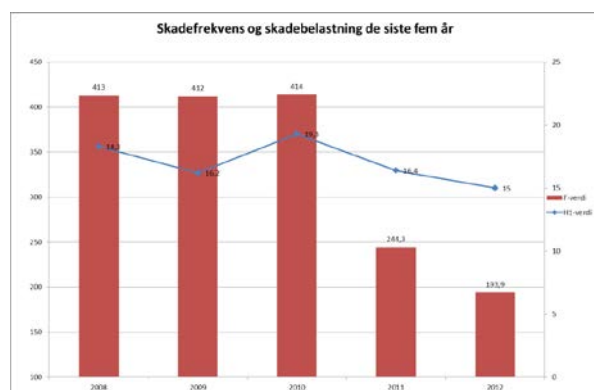

Absence due to illness

After several years of determined effort and a reduction in the absence due to illness, the absence rate increased somewhat in 2012. The Group's long-term goal is absence due to illness of maximum 5 per cent for the entire Group. Further reduction and stabilisation at a low level therefore remain priority objectives. A high rate of absence due to illness is not only inconsistent with Moelven's values; it also represents a considerable cost. In addition to work to promote well-being and general health-promoting measures, a great deal of emphasis is placed on the HSE aspects when investments are made in new production equipment. In addition, Moelven's health insurance also functions well as an HSE measure to get those employees who need health services and treatment back to work faster. The health insurance scheme was established in 2007, and it has been a successful measure from the start. The scheme has proven to be particularly favourable for employees with muscular-skeletal disorders.

Sick leave percentage	Total 2012	Total 2011
Timber	4.5 %	4.1 %
Wood	5.3 %	5.2 %
Building Systems	6.0 %	6.0 %
Other	3.5 %	3.1 %
Total	5.4 %	5.2 %

Safety for the employees

Moelven has focused on safety issues for many years. Regular risk analyses are performed at all plants and a number of measures are taken and investments made to improve safety and increase efficiency. The injury frequency has shown a positive development for several years, and a reduction was achieved in the number of lost time injuries and the injury impact in 2012 as well. The development for the last five years is illustrated in the figure below.

Injury Frequency and Injury Impact for the Last Five Years

F value

H1 value

H1 value	2012	2011
Timber	16.5	20.8
Wood	18.5	13.9
Building Systems	13.0	17.8
Other	0	0
Total	15.0	16.4

Moelven's system for recording accidents, incidents and dangerous conditions, fPortal, has been used by the Group since 2010, the same year that the health and safety campaign "Hel hjem" was launched. After this the number of injuries per million hours worked (H1) was reduced by 24 per cent, and the number of days of absence due to injuries per million hours worked (F) was reduced by 53 per cent. There are still many employees who injure themselves

while on the job at Moelven. Even if the injuries that arise are decreasing in severity, we are reinforcing our efforts to ensure a further improvement in safety.

External environment

Sustainability is one of Moelven's basic values. Environmental considerations are a natural part of day-to-day work and an ongoing effort is being made to reduce the impact on the external environment. Moelven takes responsibility for the environment through sustainable and long-term exploitation of renewable resources. Industrial production is largely based on the use of wood and the wood content of the finished products is very high in most operations. Wood as a material has many positive environmental aspects, including that it binds carbon dioxide. The vast majority of the forest raw materials that are used in Moelven's production end up as products or biofuel. The Group therefore produces little waste. The aim is that all fractions of wood shall be treated as potential input factors in the products and contribute to overall value creation.

Cellulose chips, dry chips, shavings and bark from the sawmills have ever increasing financial and environmental significance. District heating systems use dry chips, shavings and bark as fuel and the Group's own heating systems use chips and bark. For those companies in the Group that make less use of forest raw materials in their production, the industrialised building process helps to limit the environmental impact in comparison with traditional building methods.

Sustainable forestry

All sawmills in the Group are certified in accordance with PEFC-Chain of Custody (Programme for the Endorsement of Forest Certification schemes) and FSC-Chain of Custody (Forest Stewardship Council). This means that Moelven buys round timber from suppliers who engage in responsible forestry. Through this certification, Moelven has established control routines and a tracing system that can trace the raw materials up the supply chain.

Transport

Obtaining raw materials, intermediate transport and delivery of finished products all generate a considerable need for transport. In 2012, Timber and Wood transported more than nine million cubic metres of timber, biomass and finished products by truck. In addition to this, there is transport for the laminated timber, building module and interiors companies, as well as rail and sea transport. Transport is therefore a considerable challenge for the Group, in terms of both the environment and finance. Moelven is continuously working to reduce transport needs and optimise the utilisation of means of transport. The geographical location, with the production units near the raw material

areas, helps to reduce transport needs in that the volume of finished goods transported out is considerably less than that of the raw materials transported in. Influencing transporters to use eco-friendly means of transport is another important way of reducing the effects of transport on the environment. Improved road standards, and thus increased axle load limits, are measures on the part of the authorities that will help to reduce the environmental effects of road transport.

Energy

Moelven's energy and heat consumption in 2012 was about 900 GWh, made up of about 225 GWh of electric power and about 675 GWh of thermal energy. About 90 per cent of the thermal energy was produced in the Group's own plants. The energy potential of the Group's chip and bark products, including cellulose chips, is a little under 5 TWh, which means that it has a considerable potential, both for increasing our own energy production and also for increasing the market for bioenergy in general. It is Moelven's aim to be able to use our own bioenergy to cover at least 95 per cent of the need for heating our own premises and drying timber products. Moelven takes an active part in the technological and market-related development of the bioenergy sector. In parallel with this, we are developing a growing external market for biofuels. Moelven's own energy efficiency activities mean that we increasingly have eco-friendly energy surpluses that can be sold to others and help strengthen our competitive position.

CO₂ reporting in the Group

Moelven has prepared CO₂ accounts since 2010. This is based on the ISO 14064 standard for calculating emissions from Moelven's units. Moelven's production and service units generated about 445,000 tonnes of CO₂ in 2012. About 74 per cent of this represents CO₂ in the natural circulation of carbon. The emissions increased by about 17 per cent over 2011. The main reasons for this increase are a generally higher level of activity in the mechanised wood part of the Group in the first half year, an increase in activity at Moelven Bioenergi AS's bioenergy plant in Brumunddal, and the fact that only six months of operations at Moelven Vänerply AB are included in 2011 due to the acquisition date.

Emission type	Fossil/bio	2012		2011	
		CO ₂ emission (tonn)	Percentage	CO ₂ emission (tonn)	Percentage
Direct	Fossil	14 351	3.2 %	14 435	3.8 %
	Bio	332 609	74.6 %	291 576	76.6 %
Indirect	Fossil	46 494	10.4 %	41 947	11.0 %
	Bio	52 409	11.8 %	32 851	8.6 %
Total		445 862	100.0 %	380 809	100.0 %

INNOVATION

Moelven's innovation policy is to engage in development and innovation linked to a specific application of a product or in a production process. The responsibility for innovation lies within each business area, where the greatest competence exists. The Group's task is to facilitate innovation and provide resources, support and coordination across the business areas as necessary. Research and development at Moelven takes place primarily at the project level, linked to commercial operations. Moelven does not participate in so-called basic research. We can, however, participate as a party in major research projects, as long as it concerns applied research. The incubator company Moelven Utvikling AS, which has been 70%-owned by the Moelven Group, merged with Tretorget AS with effect from January 2012. Moelven Utvikling has done a great deal of work on innovation processes, among other things participating in the early stages of the development of Iso3. The merger reduces Moelven's ownership interest in the acquiring company Tretorget AS to 26.5 per cent. The new company has 8 employees and will provide a wide range of services, including innovation and incubator activities.

Product innovation

For the building module companies, the development of cost-effective concepts adapted to the market for modular buildings of several storeys has been a prerequisite for the operations as they are today. The functional and aesthetic aspects change continuously in accordance with the technological developments and market trends. The most advanced modules can currently be delivered from plants with electrical wiring, ventilation, plumbing for water-borne heating, bathroom furnishings or kitchens, etc. Fire regulations, stability requirements, noise requirements, etc., have all been areas where innovative solutions have been vital to the development of competitive concepts. The development of technical solutions for production, connecting technical installations and assembly on the building site has also been important in enabling profitable industrial production.

The building interiors companies are aimed at a market where trends move rapidly. Product development must therefore be a high priority and continuous process. For office buildings, the trend has been away from enclosed office solutions and towards the increased use of glass walls and open-plan offices with different types of rooms. This places new demands on the design and quality. Another focus area is fitting out shopping centres, where the constant changes in the shop composition and furnishings places great demands on short construction periods and following the market trends at all times.

The laminated timber area has been at the forefront of developing new products and technical solutions for many years. Many large innovation projects have been implemented in recent years. One example is Moelven

Töreboda AB's Trä8. This is a standardised component system that is suitable for buildings of up to four storeys. A newly-developed stabilising and beam structure allows unsupported spans of up to as much as eight metres, allowing for many possibilities. This system also reduces project time, partly because the necessary protection against wind and weather is quickly in place.

At Moelven Wood, product development is of great significance in allowing the product range to follow changing market trends. In this division, there is a product development project in which consumer products with an untraditional design that are ready for use are being launched on an ongoing basis, including to new target groups.

In 2012 the companies in the Wood Division launched several new products and improvements to existing products as a result of efforts to increase the degree of processing and follow the development trends in the market.

Moelven Vänerply AB's new construction plywood has been designed to satisfy the special requirements for the construction of wet rooms in the new Swedish standard. The adaptations apply to the format, seal and thickness in order to provide adequate support for the attachment of furnishings, fixtures, etc. With its Moelven Studio programme, Moelven Danmark AS has developed a completely new concept for the interior cladding of ceilings and walls, in which the form and function are part of a greater context. In addition to solving the ever greater demands placed on acoustical regulation, the wooden products in the Studio programme help create a warm expression. In many cases, Studio has been included either as decoration or art on surfaces, based on a close dialogue among Moelven, the client and architects. In 2012 Moelven delivered Studio products to many projects in both the private and public sectors, including AP Møller, Lego, Vestas and the University of Copenhagen.

A new method for the planing of exterior panels has been developed at the division's planing mills, and it provides better adhesion for subsequent surface treatment and thus less of an opportunity for the penetration of water. Moelven's planing mills are the only mills that can supply exterior panels with this type of surface.

Process innovation

For the timber-consuming units in Timber and Wood, it is primarily the optimisation of the production processes that is of key importance. The aim is to safeguard the value that is intrinsic to the raw materials, through efficient production and the purchase of raw materials that are adapted to the market, to the greatest possible extent. The investments at Moelven Tom Heurlin AB and Moelven Profil AS are examples of this. At Moelven Tom Heurlin the new planing mill significantly increases the production flexibility. Changing over to new dimensions takes place with a minimal loss of efficiency, and the opportunities for adapting the products to the

customer's needs has increased. At Moelven Profil AS the new cutting and finger joint plant improved productivity and the utilisation of the raw materials. For the processing units at Wood, the logistics systems are of great significance for reducing the cost and environmental effects of transport and for ensuring the customers' access to a wide range of products with short delivery times. Work on optimising the logistics systems is therefore continuous.

CORPORATE GOVERNANCE

Corporate governance at Moelven is based on the Norwegian recommendations for corporate governance of October 2012. The Board's report on the Group's policies and practice for corporate governance in accordance with section 3-3b of the Norwegian Accounting Act has been incorporated into the report on corporate governance. For further information about the Board and senior executives, refer to note 28.

ALLOCATION OF THE NET PROFIT FOR THE YEAR

The Board of Directors' dividend policy is based on Moelven's shareholders receiving a predictable and satisfactory cash return on their share investment. The policy provides guidelines for how much of the profit, or of distributable equity in years with a loss, shall be distributed as a dividend. The Group's net loss for 2012 was NOK 36.2 million and the equity ratio was 35.5 per cent. The outlook for 2013 is mixed at the same time. The Board therefore proposes that no dividend should be distributed. The parent company Moelven Industrier ASA, which distributes a dividend for the Group, had a net profit of NOK 81.6 million for the year after the receipt of group contributions and share dividends from subsidiaries. It is proposed that the net profit for the year be transferred in its entirety to other equity. Moelven Industrier ASA has distributable equity of NOK 108.1 million.

EVENTS AFTER THE BALANCE SHEET DATE

No events have occurred after the balance sheet date that affects the accounts that have been presented.

GOING CONCERN ASSUMPTION

In accordance with the requirements in the Norwegian accounting legislation, the Board of Directors confirms that the prerequisites have been met for preparation of the accounts under the assumption that the Company will continue as a going concern and that the annual accounts have been prepared under this assumption.

OUTLOOK

The lower level of activity in the market has made it necessary to implement savings measures and

capacity adjustments beyond what was originally planned for the previous year. The implemented measures will gradually have a greater effect in the first quarter. In addition to the seasonally low level of activity that normally marks the first quarter, no immediate improvement in the underlying market conditions is expected. Internal improvement work will therefore still have high priority. Even though the euro has strengthened somewhat against the Scandinavian currencies during the quarter, the exchange rate continues to be at a level that weakens the competitiveness of the Group's units compared with companies whose cost base is in euros. Raw material prices have declined somewhat, but the effect is lessened by falling wood chip product prices. Positive signals from other areas such as the Middle East, North Africa and the US, combined with generally unsatisfactory profitability in the sawmill industry leading to capacity adjustments, indicate that an

improvement in the international market balance for industrial timber can be expected in the medium term. Good growth is still expected in the Norwegian construction market, but a weaker performance is expected in Sweden. In Denmark a very weak market is still expected.

The Board is of the opinion that the Group has adequate solvency and access to liquidity over the long term to undertake any necessary market adaptations. Investment activity will be adapted to the ongoing development of the cash flow and market conditions. Overall the Board expects that the Group's operating result for the first quarter will be weaker than the previous year, but the year as a whole is expected to be somewhat better.

Events in 2012

Norway:

In July 2012 Moelven bought 100% of the shares in MjøsCon AS. Cost was NOK 1 million. MjøsCon AS was the owner of 15.5% of the shares Moelven Iso3 AS. After the purchase Moelven owns 100% of the shares Moelven Iso3 AS.

Norway:

Moelven has increased its stake in Moelven Granvin Bruk AS from 87.95% to 99.23%.

Norway:

Moelven Utvikling AS merged with Tretorget AS in 2012. Moelven's stake in the merged company is 26.5%.

Sweden:

Moelven Industrier AB has increased its stake in Vänerbränsle AB from 77.8% to 82.32%

Events in 2011

Norway:

On 17 October 2011, the newly formed company Moelven Profil AS took over the business of the H-Profil AS and H-Profil Grinder AS estate in bankruptcy. The business acquired mainly produces wooden components for the window industry in Norway. It has operations at Kirkenær and Grinder and had sales of more than NOK 80 million in 2010. The company had 38 employees at the time of takeover.

The operation is included in the Timber division.

Sweden:

The company Moelven Lovene AB was formed in March 2011. The company, which is located in Lovene, has spent the year building up a board processing line for the production of MDF board products for interior use. This production was previously handled by an external supplier. Production started up during the fourth quarter of 2011 and consists of compression moulding, profiling and surface treatment of MDF board. The company had 6 employees at the end of 2011. Full production, with some increase in personnel, is expected from January 2012.

The operation is included in the Wood division.

Sweden:

On 20 June 2011, the newly formed company Moelven Vänerply AB bought the business of plywood manufacturer Vänerply AB. Vänerply is located in Otterbäcken and produces spruce and pine plywood products. The factory has a production capacity of approximately 90,000 m³ or about 6 million m² of plywood a year. The company Vänerply AB had sales of SEK 300 million in 2010 and had 166 employees as at June 2011.

The most important market for the company is northern Europe and primarily Scandinavia.

The operation is included in the Wood division.

Norway:

On 31 March 2011, Moelven Elektro AS bought all the shares of K-elektro AS, an electrical company with seven employees located in Raufoss. Historically, the company has annual sales of around eight million kroner. This company operates 100% in the industrial automation segment and all its sales are in service and framework agreements. K-elektro AS will be merged into Moelven Elektro AS in 2012. The operation is included in the Building Systems division.

Notes

Note 1 - General information

Moelven Industrier ASA is a public limited company registered in Norway. The company's headquarters are located at Industriveien 2, 2390 Moelv, Norway.

The group's activities are described in the report of the board.

Note 2 - Basis for preparing the annual accounts

The consolidated accounts of the Moelven have been prepared in accordance with the International Financial Reporting Standards (IFRS) and the interpretations of the IFRS interpretations committee (IFRIC), as determined by the EU.

The consolidated accounts were presented by the board on 26 February 2013 and the ordinary general meeting to discuss the annual accounts has been fixed for 23 April 2013.

The consolidated accounts are based on the principles of historic cost accounting with the exception of the following items:

- Defined-benefit pension schemes are valued at present value of the future pension benefits that have been earned on the date of balance. Pension funds are valued at fair value.
- Financial instruments at fair value through profit or loss. These include derivatives for hedging interest rates, foreign exchange and electric power.

The consolidated accounts have been prepared with uniform accounting principles for similar transactions and events under otherwise similar conditions.

Note 3 - Significant accounting principles

Presented below are the most important accounting principles that have been used in preparing the consolidated accounts. These principles have been used in the same way for the comparison figures in the consolidated accounts.

3.1 Consolidation principles

The consolidated accounts include Moelven Industrier ASA and companies over which Moelven Industrier ASA has a controlling influence. Determining influence is normally achieved when the group owns more than 50% of the shares in the company and the group is enabled to exercise actual control over the company. Non-controlling

interest are included in group equity.

The acquisition method is used for recognising company mergers on the income statement; see note 8. Companies which are bought or sold during the course of the year are included in the group accounts from the date on which control is achieved until the date on which it ceases.

Changes in holdings in the subsidiaries that do not lead to loss of control are entered as an equity transaction. The remuneration is entered at fair value and the difference between remuneration and the value of the holding entered on the balance sheet is entered against the majority owner's equity.

With changes in holdings that lead to loss of control, remuneration is measured at fair value. The balance sheet value of holdings and obligations in the subsidiary and the non-controlling interest are deducted on the date of loss of control. The difference between the remuneration and the balance sheet value of the holding is included on the income statement as a gain or loss. Any remaining holding is measured at fair value and any gain or loss included on the income statement as part of the gain/loss on the sale of the subsidiary. Amounts included in other income and costs are entered on the income statement.

Associated companies are enterprises in which the group has significant influence, but not control, over the financial and operational management. We have holdings between 20% and 50% in our associated companies. The Group accounts include the Group's share of profits from associated companies entered by equity method from the time significant control was achieved and until such control ceases.

When the group's losses exceed the investment in an associated company, the group's balance sheet value is reduced to zero and further loss is not entered unless the group has an obligation to cover this loss.

All other investments are entered in accordance with IAS 39, *Financial instruments: Recognition and measurement* more detailed information on which is given in note 26.

Internal group transactions and intra group balances, including internal earnings and unrealised gains and losses are eliminated. Unrealised earnings in respect of transactions with associated companies and jointly controlled enterprises are eliminated with the group's share of the company/enterprise. Unrealised losses are eliminated in the same way, but only to the extent that there are indications of depreciation of value of assets that are sold internally.

3.2 New standards and interpretations

Below is a summary of new and revised standards that have been decided, but which have not come into force as at 28 February 2012. The Moelven has used the opportunity for the early application of the changes in IAS 1 and IAS 19.

Based on a preliminary analysis, the effect of the changes otherwise is not believed to have great significance for the annual accounts.

	<i>Effective date</i>	<i>Planned implementation time</i>
New standards		
IFRS 10 <i>Consolidated Financial Statements</i>	1. January 2013	Accounting year 2013
IFRS 11 <i>Joint Arrangements</i>	1. January 2013	Accounting year 2013
IFRS 12 <i>Disclosure of Interests in Other Entities</i>	1. January 2013	Accounting year 2013
IFRS 13 <i>Fair Value Measurement</i>	1. January 2013	Accounting year 2013
IFRS 9 <i>Financial Instruments</i> and related amendments to IFRS 7 regarding transition	1. January 2015	Accounting year 2015
Revised interpretations		
<i>Presentation of Items of Other Comprehensive Income (Amendments to IAS 1)</i>	1. July 2012	Accounting year 2013
IAS 19 <i>Employee Benefits (amended 2011)</i>	1. January 2013	Accounting year 2013
IAS 27 <i>Separate Financial Statements (2011)</i>	1. January 2013	Accounting year 2013
IAS 28 <i>Investments in Associates and Joint Ventures (2011)</i>	1. January 2013	Accounting year 2013
<i>Disclosures—Offsetting Financial Assets and Financial Liabilities (Amendments to IFRS 7)</i>	1. January 2013	Accounting year 2013
<i>Offsetting Financial Assets and Financial Liabilities (Amendments to IAS 32)</i>	1. January 2014	Accounting year 2014

3.3 Functional currency and presentation currency

The group's presentation currency is NOK. This is also the functional currency of the parent company. Subsidiaries with other functional currencies are converted to the day rate for balance items and to the transaction rate for income statement items. Average monthly exchange rate is used as an approximation of transaction rate. Translation differences are entered against other income and costs ("OCI"). In any future sale of investments in foreign subsidiaries, accumulated translation differences connected with the subsidiary that are referred to the majority owners will be entered on the income statement.

3.4 Use of estimates in preparing the annual accounts

Management has used estimates and assumptions which have affected assets, liabilities, income, costs and information regarding potential obligations. This applies in particular to depreciation of fixed assets, assessment of added value and goodwill in connection with acquisitions, inventory, project assessments and pension commitments. Future events may cause the estimates to change. Estimates and the underlying assumptions are continually assessed. Changes in accounting estimates are entered into the accounts during the period in which the changes occur. Where changes also affect future periods, the effect is distributed across the current and future periods. See also note 4.

3.5 Foreign currency

Foreign exchange transactions

Foreign exchange transactions are calculated at the exchange rate prevailing at the time of the transaction. Monetary items in foreign currency are converted to Norwegian kroner by using the rate of exchange on the balance date. Non-monetary items which are measured at historical exchange rates expressed in foreign currency are converted to Norwegian kroner by using the exchange rate at the time of transaction. Non-monetary items which are measured at fair value expressed in foreign currency are converted to the exchange rate determined at the time of the balance. Foreign currency fluctuations are recognised on the income statement continuously over the accounting period.

Activities abroad

Assets and liabilities in foreign companies including goodwill and fair value adjustments which arise on consolidation are converted to Norwegian kroner by using the exchange rate on the balance date. Income and expenses in foreign enterprises are converted to Norwegian kroner by using the average exchange rate. Exchange rate differences are entered in other income and costs ("OCI").

3.6 Income

Income is recognised on the income statement when it is probable that transactions will generate future financial benefit which will accrue to the company and the size of the amount can be reliably estimated. Sales income is presented after deduction of value added tax and discounts. Internal sales within the group are eliminated.

Income from sale of goods is entered on the income statement once delivery has taken place and most of the risk and profit have been transferred.

Income from sale of services and long-term manufacturing projects is entered on the income statement as the project progresses, when the outcome of the transaction can be reliably estimated. In some of the companies, progress is measured as accrued costs in relation to total estimated costs, while in other companies, progress is measured on invoicing in relation to the contract total. When the result of the transaction cannot be reliably estimated, only income corresponding to accrued project costs will be recognised as income. In the period in which a project is identified as giving a negative result, the estimated loss on the contract will be recognised on the income statement in its entirety.

The group produces and sells energy to end customers. The sales is entered as income when the energy has been delivered and is read off at the customer's premises. Sales are entered based on the prices achieved, which are contract prices, but which can also be subject to price guarantee for the delivery period. Not including the financing element in sales is being considered. Otherwise, payment terms correspond to those that are normal in the market.

Interest earnings are recognised on the income statement based on the effective rate as they are earned.

Dividends are entered when the shareholders' rights to receive dividends have been adopted by the general meeting.

3.7 Segments

For management purposes the group is organised into four different divisions according to products and range of services. The divisions represent the basis for the primary report segments. Financial information regarding segments and geographical distribution is presented in note 6.

In segment reporting, internal earnings on sales between the segments are eliminated.

3.8 Loan costs

Loan costs are entered on the income statement when the cost arises. Loan costs are entered on the balance sheet to the extent that they are directly related to the purchase manufacture of an asset and where the manufacturing period is long. A long manufacturing period means close to 12 months. Interest rate costs accrue during the build period until the asset is entered on the balance sheet. Balance entry of the loan costs is done until the point when the asset is ready for use. If the cost price exceeds the asset's fair value, it is written down.

3.9 Income tax

Tax costs consist of payable tax and changes in deferred tax. Deferred tax/tax benefits are calculated on all differences between book and taxable values of assets and liabilities, with the exception of:

- temporary differences relating to goodwill that are not tax deductible
- temporary differences relating to investment in subsidiaries, associated companies or jointly controlled enterprises that the group controls, when the temporary differences will be reversed and this is not expected to occur in the foreseeable future

Deferred tax advantage is recognised on the income statement when it is probable that the company will have sufficient tax surplus in later periods to utilise the tax advantage. The companies enter deferred tax benefits that have not been previously entered to the extent that it has become probable that the company may make use of the deferred tax benefit. Likewise the company will reduce deferred tax advantages to the extent that the company no longer regards it as probable that it can utilise the deferred tax advantage.

Deferred tax and deferred tax advantages are measured based on anticipated future tax rates for the companies in the group where temporary differences have previously arisen.

Deferred tax and deferred tax advantages are recognised at nominal value and are classified as financial capital expenditure (long-term liability) on the balance sheet.

Payable tax and deferred tax are entered directly against equity to the extent that the tax entries relate to equity transactions.

3.10 Research and development

Expenses associated with research activities are recognised on the income statement when they arise. Costs relating to development activities are entered on the balance sheet to the extent to which the product or process is technically and commercially realisable and the group has sufficient resources to complete the development. The costs that are entered include material costs, direct payroll costs and a proportion of directly attributable joint expenses. Development costs entered on the balance sheet are entered as acquisition costs minus accumulated depreciation and write-down.

Development costs entered on the balance sheet are depreciated on a straight line basis over the estimated lifetime of the asset.

3.11 Tangible fixed assets

Tangible fixed assets are measured at acquisition cost, less accumulated depreciations and write downs. When assets are sold or disposed of, the value on the balance sheet is deducted and any profit or loss is entered on the income statement.

Acquisition price for fixed assets is the purchase price including duties/taxes and costs directly associated with preparing the fixed assets for use. Costs after the fixed asset has been taken into use, such as continuous maintenance, are entered on the income statement, while other costs that are expected to provide future financial benefit are entered on the balance sheet.

Depreciation is calculated on a straight-line basis over subsequent decomposition and useful life:

Type of asset	Significant components	Depreciation speed
Office building	Building Sprinkling Fire detection Technical installations	15 - 20 years 10 years 10 years 7 – 10 years
Stores	Building alone	15 – 20 years
Drier	The driers are a construction that should be viewed together Depreciation should be the same for all elements of the drier: Building Machine Control Culvert	10 - 15 years 10 - 15 years 10 - 15 years 10 - 15 years
Machines	Machine Control systems Foundation	10 - 12 years 10 - 12 years 10 - 12 years
Production premises	Building Technical installation Water and sewage Sprinkler system	10 - 15 years c. 10 years c. 10 years c. 10 years
Boiler house	Building Culvert Heating unit	15 – 20 years 10 - 15 years 10 - 15 years
Fixtures and fittings, tools, office machinery etc.	No decomposition	4 - 7 years
Means of transport	No decomposition	4 – 7 years
Plots of land		No depreciation

Depreciation period and method are reviewed annually. Scrap value is estimated at each year end and changes in estimated scrap value are entered as estimate changes.

Plant under manufacture is classified as a fixed asset and is entered as cost until manufacture or development is completed. Plant under manufacture is not depreciated until the asset is taken into use.

3.12 Leasing

Financial lease agreements

Lease agreements for which the group assumes the main risk and profit involved in ownership of the asset are financial lease agreements. At the beginning of the lease period, financial lease agreements are recognised at an amount corresponding to the lower of either fair value or the present value of the minimum lease minus the accumulated depreciation and write-down. For calculation of the lease agreement's present value the implicit interest cost in the lease agreement is

used if it is possible to calculate this. If not, the company's marginal borrowing interest is used. Direct expenses relating to establishing the lease contract are included in the asset's cost price.

The same depreciation time is used as for the company's other depreciable assets. Where reasonable certainty that the company will assume ownership at the end of the lease period does not exist, the asset is depreciated over the shorter of the duration of the lease agreement and the asset's economic life cycle.

Operational lease agreements

Lease agreements where the main risk and profit associated with ownership of the asset are not transferred are classified as operational lease agreements. Lease payments are classified as operating expenses and are recognised on a straight-line basis over the contract period.

3.13 Intangible assets

Intangible assets acquired separately are entered on the balance sheet at cost. The cost of intangible assets obtained through acquisitions are entered on the balance sheet at fair value in the consolidated opening balance. Intangible assets entered on the balance sheet are entered in the accounts at cost less any depreciation or write down.

Internally generated intangible assets, with the exception of recognised development costs, are not entered on the balance sheet but are entered as costs on an ongoing basis.

Useful lifetime is either predetermined or non-predetermined. Intangible assets with a predetermined useful life are depreciated over this period and tested for write down if so indicated. Depreciation method and period are assessed at least annually. Changes in depreciation method and/or period are treated as estimate changes.

Intangible assets with a non-predetermined useful life are tested for depreciation at least annually, either individually or by cash flow generating unit. Intangible assets with a non-predetermined useful life are not depreciated. The useful life is assessed annually to determine whether the assumption of non-predetermined useful life is reasonable. If not, a change is made to predetermined useful life.

Software

Costs relating to the purchase of new software are entered on the balance sheet as an intangible asset if these costs are not part of the acquisition cost of hardware. Software is normally depreciated on a straight line basis over 3 years. Costs arising as a result of maintaining the future usefulness of software are entered as costs if the changes to the software do not increase the future financial benefit of the software.

3.14 Business combinations and goodwill

Business combinations are entered in accordance with the acquisition method. Refer to note 3.24 with regard to the measurement of non-controlling interest. Transaction costs are entered on the income statement as they occur.

Remuneration for the purchase of a company is measured at fair value on the date of acquisition and consists of cash.

When a company is purchased, all assets and obligations taken over are assessed for classification and assignment in accordance with contract conditions, economic circumstances and relevant conditions on the date of acquisition. Assets and debts taken over are recognised on the

balance sheet at fair value on the consolidated opening balance unless IFRS 3 indicates that other measurement rules shall be used.

Allocation of added value in business combinations is amended if new information arises regarding fair value on the date of taking control. Allocation can be changed up to 12 months after the date of acquisition if this is specified at the time of acquisition. The non-controlling interest are calculated as the minorities' percentage of identifiable assets and debts.

In the case of step by step acquisition, earlier assets are measured at fair value on the date of acquisition. Changes in the value of earlier assets are entered on the income statement.

Goodwill is calculated as the sum of the remuneration and book value of the non-controlling interest and fair value of previously owned assets, less the net value of identifiable assets and obligations calculated on the date of acquisition. Goodwill is not depreciated but tested at least annually for loss in value. With regard to a write-down assessment, goodwill is allocated to cash flow generating units or groups of cash flow generating units that are expected to have synergy effects from the company amalgamation.

The part of the fair value of the equity that exceeds the remuneration (negative goodwill) is immediately entered on the income statement on the date of acquisition.

3.15 Public grants

Public grants are entered in the accounts when there is reasonable certainty that the company will fulfil the conditions associated with the grant and that the grant will be received. Recognition of operational grants is calculated systematically over the grant period. Grants are recognised as deductions from the cost that the grant is intended to cover. Investment subsidy is entered on the balance sheet in a systematic way over the life cycle of the asset. Investment subsidy is entered either as deferred income or as a deduction when determining the value of the asset on the balance sheet.

3.16 Financial instruments

According to IAS 39 *Financial Instruments – recognition and measurement*, financial instruments within the scope of IAS 39 are classified in the following categories: financial assets at fair value through profit or loss, held to maturity, loans and receivables, available for sale and other obligations.

Financial instruments that are primarily held for the purpose of selling or buying back in the short term, financial instruments in a portfolio of identified instruments that are controlled together and where there are clear signs of short term realisation of gains and derivatives that have not been designated as hedging instruments are classified as held for trading purposes. These instruments are included in the category financial assets at fair value through profit or loss, together with financial instruments that qualify as, and have been designated as, instruments at fair value through profit or loss. Financial guarantee contracts are measured at the higher of what follows from IAS 37 *Provisions, Contingent Liabilities and Contingent Assets* and IAS 18 *Revenue*, unless the contracts qualify as, and have been designated as, instruments at fair value through profit or loss.

Financial assets with fixed or determinable cash flows and fixed redemption dates, where the group has the intention of and the ability to hold the investment to maturity, are classified as investments held to maturity, with the exception of those instruments that the company designates as instruments at fair value through profit or loss or available for sale, or which meet the criteria for inclusion in the category loans and receivables.

Financial assets with fixed or determinable cash flows that are not listed in an active market are classified as loans and receivables, with the exception of instruments that the group has designated as instruments at fair value through profit or loss or available for sale.

All other financial assets are classified as available for sale.

Financial obligations that do not fall into the category held for trading purposes and that have not been designated as instruments at fair value through profit or loss are classified as other obligations.

Financial instruments held to maturity are included in financial fixed assets, unless the redemption date is within 12 months of the balance date. Financial instruments in the group that are held for trading purposes are classified as current assets. Financial instruments available for sale are presented as current assets if management has decided to dispose of the instrument within 12 months of the balance date.

Investments held to maturity, loans and receivables and other obligations are recognised at amortised cost. Financial instruments classified as available for sale and held for trading purposes are recognised at

fair value, as observed in the market on the balance date, without deduction for costs connected with sale.

Gains or losses resulting from changes in the fair value of financial investments classified as available for sale are recognised as other income and costs until the investment is realised. On realisation, accumulated gains or losses on the financial instrument that have previously been recognised against equity are reversed and the gain or loss is entered on the income statement.

Gains or losses resulting from changes in the fair value of financial investments classified as held for trading purposes or that have been designated as instruments at fair value through profit or loss are entered on the income statement and presented as financial income or cost.

The fair value of financial instruments that are traded in active markets is determined at the end of the reporting period by referring to the listed market price from traders of financial instruments (buying rate for long positions and selling rate for short positions), without deduction for transaction costs.

For financial instruments that are not traded in an active market, the fair value is determined with the aid of a suitable valuation method. Such valuation methods involve the use of recent market transactions at arm's length between well-informed and voluntary parties, if such are available, referral to the current fair value of another instrument that is practically the same, discounted cash flow calculation or other valuation model.

An analysis of fair value of financial instruments and other details regarding the measurement of these is given in the note 26.

3.17 Hedging

The group performs financial hedging transactions. However on the basis of an assessment of cost and benefit of hedge accounting in accordance with IAS 39, it has been decided that the group does not perform hedge accounting.

3.18 Derivatives that are not hedging instruments

Financial derivatives that are not recognised as hedging instruments are assessed at fair value. Changes in fair value are entered on the income statement on an ongoing basis.

An inbuilt derivative is separated from the host contract and recognised as a derivative if and only if all the following conditions are fulfilled:

- The financial characteristics and the financial risk of an inbuilt derivative are not closely related to the financial characteristics and the financial risk of the host contract.
- A separate instrument with the same conditions as the inbuilt derivative would have satisfied the definition of a derivative.
- The combined instrument (main contract and inbuilt derivative) is not measured at fair value through profit or loss.

3.19 Impairment of financial assets

Financial assets valued at amortised cost are written down when it is probable based on objective evidence that the instrument's cash flow has been affected negatively by one or more events occurring after the initial recognition of the instrument. The write-down amount is entered on the income statement. If the cause of the write down later ceases and the cessation can be objectively associated with an event taking place after the inclusion of the write-down, the previous write-down is reversed. This reversal must not result in the balance value of the financial asset exceeding the amount of what the amortised cost would have been, if the loss in value had not been included at the time when the write-down was reversed. Reversal of earlier write down is presented as income.

Financial assets classified as available for sale are written down when there are objective indications that the value of the asset has fallen. The accumulated loss that has been entered directly to equity (the difference between acquisition cost and current fair value less write-down that has previously been included on the income statement and any amortisation amount) is removed from equity and entered on the income statement. If the fair value of a debt instrument classified as available for sale increases at a later date, and the increase can be objectively linked to an event that occurred after the write-down was entered on the income statement, the write-down shall be reversed on the income statement. Write down of an investment in an equity instrument is not reversed on the income statement.

3.20 Inventory

Inventory is recognised on the income statement at the lower of acquisition cost or net sales price. Net sales price is an estimated sales price for ordinary

operations minus estimated costs for completion, marketing and distribution. Acquisition cost is allocated by use of the FIFO method and includes expenses accrued when acquiring the goods and the costs of bringing the goods to their current condition and location. Proprietary goods include variable and fixed costs that can be allocated based on normal capacity utilisation.

3.21 Projects

The Building Systems division primarily performs contract assignments (projects) that last from a few months to one or two years. For projects, Moelven mainly uses current income entry based on the anticipated end result. This means that income is entered in line with the execution of the work, based on the degree of completion.

In following up on projects, the focus is on checking that the anticipated end result (final prognosis) and result to date are equal to the anticipated end result multiplied by the degree of completion.

Additional claims and disputed amounts are not normally entered until agreement has been reached or there is a court judgement. However part of the claim is entered if there is an overwhelming probability of the anticipated outcome. Provision is made for claims activities based on historical experience and identified risks. Guarantee periods are normally from three to five years.

For projects that are expected to result in a loss, the entire loss is entered on the income statement as soon as it is identified. Costs of tendering and other preparatory work are entered as they arise.

For the Laminated Timber, Electrics and Building Module units, the degree of completion is determined on the basis of completed production and is normally calculated as the relationship between accrued costs to date and the estimated total costs of the project. Accrued costs to date are equal to book costs plus deferral for the lag in invoicing (accrued, not entered). Income to date is equal to the total anticipated costs plus anticipated project contribution, multiplied by the degree of completion.

For the Building Interiors unit, the degree of completion is determined based on the invoicing schedule. Here, invoicing is done according to progress. Accrued costs to date are equal to book costs plus deferral for the lag in invoicing (accrued, not entered).

For projects that are directed by outside companies, invoicing is performed monthly with 30 day payment terms. Invoicing is normally done in line with the completion of the work, but there are also payment schedules that do not correspond to progress.

For projects, both income and costs are scheduled. Income that has been earned but not yet invoiced is entered under the item "Completed, not invoiced". Invoiced income that has not yet been earned (forward payment plans) is entered under the item "Prepayments from customers" under other short term liabilities; see note 19.

Only one of these items is used per project. Thus each project shows either a net receivable for the customer or a net liability to the customer.

Scheduling of costs (accrued, not entered) is recognised as trade accounts payable, while provisions for claims activities on concluded projects are entered as claims provisions etc.

Part of the outstanding receivables is secured in the form of bank guarantees or other forms of security. There is not considered to be any credit risk associated with public sector customers. Refer to note 5 on financial risk.

Refer to note 19 Projects in progress, note 18 Accounts receivable, note 25 Other short term liabilities and note 24 Claims provisions etc.

When the result of the transaction cannot be reliably estimated, only income corresponding to accrued project costs will be recognised as income. In the period in which a project is identified as giving a negative result, the estimated loss on the contract will be recognised on the income statement in its entirety.

3.22 Cash and cash equivalents

Cash includes cash holdings and bank deposits. Cash equivalents are short term liquid investments that can be immediately converted into a known amount of cash and that have a maximum of 3 months to maturity.

In the cash flow statement, the bank overdraft has been subtracted from the balance of cash and cash equivalents.

3.23 Equity

Own shares

On repurchase of own shares, the purchase price including immediate costs is entered as a change in equity. Own shares are presented as a reduction of

equity. Losses or gains on own share transactions are not entered on the income statement.

Costs of equity transactions

Transaction costs directly associated with equity transactions are entered directly to equity after deduction for tax.

Other equity

Translation differences

Translation differences arise in conjunction with currency differences on consolidation of foreign units.

Currency differences on monetary items (liability or receivable) that are in reality part of a company's net investment in a foreign unit are also entered as translation differences.

For disposal of foreign units the accumulated translation difference associated with the unit is reversed and entered on the income statement for the same period as the profit or loss on the disposal is entered on the income statement.

3.24 Non-controlling interests (minority interests)

Non-controlling interest in the consolidated accounts represent the minority's holding of the balance sheet value of equity. In a business combination, non-controlling interest are measured according to their proportionate share of identified assets.

The subsidiary company's results, as well as the individual components of other income and costs, are attributable to owners of the parent company and the non-controlling interest. The total result is attributed to the parent company's owners and to the non-controlling interest, even if this leads to a negative minority interest.

3.25 Employee contributions

The group's Norwegian companies

All the Norwegian companies have collective, contribution-based pension schemes. These are schemes with a savings portion and a risk portion with earnings right. Pension premiums are entered as costs as they occur.

The collective contributory pension was established in 2005, and those who were members of the group's collective defined benefit pension plans had the option of changing. The defined benefit plans continue as closed schemes and no new members are included in these schemes. All new employees

enter the group's collective contributory pension. The closed schemes are defined benefit plans that give the employees entitlement to agreed future pension benefits. The benefits are based on the number of years of earning and pay level on retirement.

The group's foreign companies

Many of the group's foreign companies offer their employees pensions based on agreed individual contribution-based pension schemes. In Sweden, most employees are covered by a collective occupational pension agreement. The scheme is defined as a multi-employer plan. Salaried staff born before 1979 are included in an individual occupational pension scheme that is also defined as a defined benefit plan. Because of the difficulty of reliably measuring the benefit level of these plans, there is insufficient information on an individual basis to enter the plans in the accounts as defined benefit schemes. The plans are entered as if they were contribution-based schemes. Salaried staff born after 1979 are included in an occupational pension scheme that is premium based and is therefore treated in the accounts as contribution-based.

Defined-benefit pension schemes

Defined-benefit pension schemes are valued at present value of the future pension benefits that have been earned on the date of balance. Pension funds are valued at fair value.

Changes in defined-benefit pension commitments that are due to changes in pension plans are distributed over the estimated average remaining earnings period. Estimate changes and changes in financial and actuarial assumptions (actuarial gains and losses) are entered in other income and costs (OCI). The period's net pension costs are classified as payroll and personnel costs.

The group entered all accumulated net actuarial losses and gains (estimated deviations) against equity on the date of transition to IFRS, 1 January 2010.

Gains and losses on the curtailment or settlement of a defined-benefit pension scheme are recognised on the income statement on the date the curtailment or settlement occurs.

Curtailment occurs when the group decides on a significant reduction in the number of employees covered by a scheme or changes the conditions for a defined-benefit pension scheme so that a considerable part of the present employees' future

earning no longer qualifies for benefits or only qualifies for reduced benefits.

Contributory pension scheme

In addition to the defined benefit scheme described above, the group's other companies have made contributions to local pension plans. Contributions are given to the pension plan for full-time employees and represent from 3% to 5% of pay. Pension premiums are entered as costs as they occur.

3.26 Provisions

A provision is recognised when the group has an obligation (legal or self-imposed) as a result of an earlier event, it is probable (more probable than not) that a financial settlement will take place as a result of this obligation and the amount can be reliably measured. If the effect is considerable, the provision is limited by discounting anticipated future cash flow by using a discount rate before tax that reflects the market price of the monetary value and, if relevant, the risk associated with the specific provision.

A provision for guarantees is included when the underlying products or services are sold. The provision is based on historical information about guarantees and a weighting of possible outcomes according to the probability of their occurrence.

Restructuring provisions are included when the group has approved a detailed and formal restructuring plan and the restructuring has already started or has been made public.

Provision for loss making contracts is entered when the group's anticipated income from a contract is lower than the unavoidable costs involved in discharging obligations under the contract.

3.27 Conditional liabilities and assets

Conditional liabilities are not recognised in the annual accounts. Significant conditional liabilities are reported, with the exception of conditional liabilities where the probability of the liability is low.

A conditional asset is not recognised in the annual accounts, but is reported where it is probable that a benefit will accrue to the group.

3.28 Subsequent events

New information about the company's financial position on the balance date that arises after the balance date is taken in to consideration in the

annual accounts. Events after the balance date that do not affect the company's financial position on the balance date, but which will influence the company's financial position in the future, are reported if they are significant.

Currency exchange rates

The following exchange rates against the Norwegian kroner (NOK) have been used in consolidating the accounts.

	2012	2011
Swedish krone (SEK)		
Income statement rat	0.8589	0.8634
Balance sheet rate	0.8549	0.8701
Danish krone (DKK)		
Income statement rat	1.0043	1.0460
Balance sheet rate	0.9840	1.0430
Euro (EUR)		
Income statement rat	7.4754	7.7931
Balance sheet rate	7.3410	7.7540
British pound (GBP)		
Income statement rat	9.2186	8.9833
Balance sheet rate	8.9958	9.2829

Note 4 – Critical accounting estimates and judgements

In preparing the annual accounts in accordance with IFRS, the company's management have used estimates based on good faith and assumptions which are believed to be realistic. Situations or changes may arise which may mean that such estimates require adjustment and thereby affect the company's assets, debt, equity or profit and loss.

The company's most important accounting estimates relate to the following:

- Depreciation on tangible fixed assets.
- Valuation of inventory
- Fair value of assets and obligations in acquisitions.
- Net pension commitments
- Project valuations

Anticipated useful life of the company's production equipment is affected by the technological development and profitability of the plant. Choice of depreciation period is an estimate.

If there are indications of a fall in value, the inventory in the subsidiaries must be tested for impairment. Book value is then compared with estimated net sales value. Management must take many assumptions into account when making this estimate.

The company's recognised goodwill and intangible assets are assessed for write down annually. The company is greatly affected by economic cycles that lead to considerable fluctuations in fair value in the company. The group is particularly affected by developments in the export markets in Europe and Africa, as well as fluctuations in the building industry in Scandinavia. Exchange rates and market interest rates also affect valuation. Valuations of the various established segments will naturally vary within a range of +/- 20%.

For businesses in less mature markets, the range may be even greater. Moelven must distribute the cost price of acquired companies over acquired assets and acquired debt based on estimated fair value. The valuation estimates require management to make considerable assessments in the choice of method, estimates and assumptions. Significant acquired intangible assets that Moelven has included comprise customer base and goodwill. The assumptions made for the assessment of intangible assets include, but are not limited to, estimated average lifetime of customer relationships based on natural loss of customers. The assumptions made for the assessment of assets include, but are not limited to, the reacquisition costs of fixed assets. Management's assessments of fair value are based on assumptions that are deemed to be reasonable, but that have a built in uncertainty, and as a result of this the actual results may differ from the calculations.

Pension commitments are calculated by actuaries. The actuary calculates the commitments based on assumptions provided by Moelven's management. These assumptions are the best estimate of the market situation as at 31.12. Moelven largely follows the recommendations of the Norwegian Accounting Standards Board, but management reviews the assumptions to ensure that they are in accord with the situation in the group. Changes in the assumptions could have a significant effect of pension commitments and equity. Sensitivity calculations are shown in note 23.

Project assessment is dependent on estimates of degree of completion, anticipated final status, any loss projects, guarantee obligations and claims. The managements of the subsidiaries within Building Systems use figures based on experience, among others, in preparing the estimates.

Note 5 Financial risk management

Risk management principles and processes

The Moelven group is exposed to several types of financial risk in its activities. The main objective of the group's financial policy is to ensure a predictable and cost-effective financial framework for industrial operations and to minimise the potential negative effects that unforeseen events in the financial markets might have on the group's cash flow. The group's position on financial risk is that it is the industrial activities rather than financial transactions that shall create the conditions for profitability.

In accordance with the financial policy, which is adopted by the board, financial risk management of the group's central finance department is done in collaboration with the various operational units.

The most important financial risks and the way they are managed are described below:

5.1 Market risk

Market risk is the risk that a financial instruments fair value or future cash flow will fluctuate as a result of changes in market prices. Market risk includes three types of risk: exchange rate risk, interest rate risk and other price risk.

5.1.1 Foreign currency - transaction risk

In this context, transaction risk means the exchange rate risk that is caused by the possibility of exchange rate changes in the period between the time a transaction in foreign currency is agreed and the time of settlement. About 20 per cent of the group's operating revenues come from markets outside Scandinavia and carry exchange rate risks.

Both raw materials and finished goods are also imported into Norway from Sweden. The most important foreign currencies are EUR, SEK and GBP.

Moelven uses forward buying of currency to counteract large profit fluctuations as a result of variations in exchange rates.

The group companies shall perform all currency hedging with the group's central finance department, which hedges the group's total net exposure externally.

Norwegian subsidiaries hedge against NOK, Swedish ones against SEK. Results from Swedish subsidiaries are included as part of net investment in foreign subsidiaries and hedged for exchange rate fluctuations together with other equity.

In accordance with the financial policy, net exposure in foreign currency shall be hedged against rate fluctuations according to the following main principles:

- At least 80 per cent of obligations in foreign currency shall be hedged when entering into the contract. This relates mainly to investment projects where machinery and equipment is bought from abroad.
- Anticipated net exposure for the next 3 months shall be hedged.
- Anticipated net exposure from 4 to 18 months ahead can be hedged within defined limits.

Because of the hedging strategy that has been chosen, changes must be long-term so as to have the full effect on the group's profitability, and during the hedging period operational adaptations may be made to compensate for the external changes.

Sensitivities - foreign currency

The table shows the transaction volume for the main currencies in 2012 and 2011.

Transactions and hedging in the main currency 2012

NOK million	EUR	GBP	DKK	Other	Total
Operating revenues	696	237	343	24	16
Operating expenses	351	5	138	19	9
Net exposure	344	232	206	5	8
Estimated annual net exposure	344	232	206	5	8
Hedging volume pas at 31.12.2012 maturing <12 md	53	37	23	-	-
Hedging ratio as at 31.12.2012 for the next 12 Months	16 %	16 %	11 %	0 %	0 %

Transactions and hedging in the main currency 2011

NOK million	EUR	GBP	DKK	Other	Total
Operating revenues	588	266	500	20	52
Operating expenses	234	10	465	16	14
Net exposure	354	256	35	4	38
Estimated annual net exposure	354	256	35	4	38
Hedging volume pas at 31.12.2011 maturing <12 md	91	48	8	1	-
Hedging ratio as at 31.12.2011 for the next 12 Months	26 %	19 %	24 %	29 %	0 %

Estimated annual net exposure probably consists primarily of Norwegian unit's import of timber from Sweden, and Swedish units' exports of finished goods to Norway. Since a large proportion of the Group's total production takes place in Sweden, the Group has significant costs in Sweden. However, only Norwegian entities' operating costs in SEK currency hedged. Net income from the Swedish subsidiaries are included in retained earnings, and the currency risk arising in connection with these units' operating income and expenses are taken into account the risk related with the risk of conversion to equity.

The table below shows sensitivity in the results before tax to exchange rate changes when all other conditions remain unchanged.

The calculations are on the basis of rate changes being constant for the whole year. The effects of currency hedging, changes in the market value of financial hedging instruments and revaluing of balance sheet items have not been taken into account.

	Average rate 2012	Annual net exposure i NOK	NOK decline by 1 %		NOK decline by 10 %		NOK strengthening by 1 %		NOK strengthening by 10 %	
			Rate after change	Income effect +/-	Rate after change	Income effect +/-	Rate after change	Income effect +/-	Rate after change	Income effect +/-
Change i EURNOK	7,48	344	7,55	3,44	8,22	34,44	7,40	3,44	6,73	34,44
Change i GBPNOK	9,21	232	9,30	2,32	10,13	23,18	9,12	2,32	8,29	23,18
Change i SEKNOK	85,89	340	86,75	3,40	94,48	34,00	85,03	3,40	77,30	34,00

Based on historical price performance, it is used changes of respectively 1 and 5 cents for SEKNOK. The market value of financial instruments depends on the balance sheet exchange rate in relation to safety courses that have been achieved. Changes in market value will result in an unrealized gain or loss is recognized as finance costs. The table below shows how the profit before tax would have been affected by a change in the balance sheet date.

The calculation is made on the basis of actual hedging volumes in the specified currencies per 31.12.2012.

	Rate per 31.12	NOK decline by 0.1	NOK decline by 0.5	NOK strengthening by 0.1	NOK strengthening by 0.5
EUR	7.75	-1.15	-5.76	1.15	5.76
GBP	9.28	-0.52	-2.62	0.52	2.62

5.1.2 Foreign currency - translation risk

In this context, translation risk means exchange rate risk due to the balance sheet including items that are denominated in a foreign currency. For the group companies, this translation risk is eliminated in that financing shall occur in the same currency as the asset is entered in the accounts.

About half of the group's total balance sheet is connected to activities in Sweden. The balance sheet figures will therefore be affected by the prevailing exchange rate between the Swedish and Norwegian kroner. A large part of equity is secured against this in that share investment in most of the group's Swedish subsidiaries is financed in

Swedish kroner.

The table below shows the effect on consolidated equity by a change in the exchange rate of +/- 10 percent:

Amount in NOK million	2012	2011
10 % change i SEK/NOK	64,4	66,7
10 % change i EUR/NOK	0,2	0,1
10 % change i DKK/NOK	2,0	2,4
10 % change i GBP/NOK	0,3	0,3
Total effect	66,9	69,5

5.1.3 Interest rate risk

Interest rate risk is the risk that a financial instrument's fair value or future cash flows will fluctuate because of changes in market interest rates. Net interest bearing debt provide the basis for interest rate risk. The bulk of the debt in SEK, which is why interest rates in Sweden are most important for the development of the Group's interest expense.

The Group companies will be financed with loans from the parent company. All external borrowing is done by the parent company, which also makes hedging in accordance with financial policy. Hedging instruments that can be used is the ordinary interest rate swaps, FRAs and complex swap basis, of a kind normally used for such purposes. As a measure of the extent that interest rate lock duration is used computed the total of outstanding debt and hedging transactions. The total duration should be minimum of 12 md and maximum 36 months shall not be entered into hedging agreements with a maturity of more than 10 years.

The Group's average net debt in 2012 was NOK 1 224.4 million. If the debt had been without hedging would a one percentage point change in interest rates led to a change in the Group's financing costs of NOK 10.7 million. According to financial policy, however, was 67.5 per cent of Group net debt secured by the use of financial hedging instruments, primarily interest rate swaps, where floating rate swapped to fixed rate. Market value changes of interest rate instruments are recognized in the profit and loss account and will have an opposite effect, but do not affect cash flow. The unrealized item from interest rate instruments will normally be greater than they realized the records, because market value is related to the maturity of the instrument.

Estimated effect on profit before tax by a change in interest rates and yield curves in the future are shown in the table below.

Amount in NOK million	Average NIBD 2012	Average secured part	Interest rate change - 50 bp	Interest rate change + 50 bp
The estimated interest cost, 100% floating rate	1 224.4		6.2	-6.2
Secured portion not affected by market fluctuations		56.7 %	-3.5	3.5
Net effect on annual interest expenses before unrealized items			2.7	-2.7
Unrealized gains / losses on hedging instruments that are recognized			-14.3	13.4
The total effect including unrealized valuechange			-11.6	10.7

5.1.4 Other price risk

Other price risk is the risk that a financial instrument's fair value or future cash flow will fluctuate because of changes in market prices (apart from changes that are due to interest rate risk or exchange rate risk), regardless of whether these changes are caused by factors that are specific for the individual financial instrument or the instrument's issuer, or by factors that affect all corresponding financial instruments that are traded in the market.

The price of electric power is another important factor that affects the group's profitability. About 185 GWh of electric power a year is bought via the group's electricity suppliers on the Nasdaq OMX exchange. According to the group's finance policy, the need for electric power shall be secured against price fluctuations so as to ensure stability and predictability. The anticipated power requirement is hedged within stated maximum and minimum levels by forward buying on Nasdaq OMX with a 5 year maximum horizon.

The price of electric power is denominated in EUR. The group's power costs are therefore affected by both price

changes and exchange rate changes. The group's annual electricity consumption has been relatively stable, apart from increases caused by business combinations.

The table below illustrates the effects on results before tax of a change in the electricity price of +/- 1 EUR per MWh at different exchange rate levels for EURNOK. The indirect exchange rate exposure is not considered to be a built in derivative, since the electricity price is denominated in EUR. This exposure has been taken into account when calculating net exchange rate exposure for the group.

Amount in NOK million	Consumption	P/L effect	EURNOK		
	in GWh	in EUR 1.000	7,25	7,50	7,75
Increase in the price of 1 EUR / MWh	224	-224,00	-1,62	-1,68	-1,74
Proportion secured acc. policy is the average 72.5%		145,60	1,06	1,09	1,13
Sensitivity taking into account hedging		-78,40	-0,56	-0,59	-0,61

The effect on profit before tax of exchange rate changes on the total consumption per year is shown in the table below:

Amount in NOK million	Consumption	Price	EURNOK		
	in GWh	EUR/MWh	7,25	7,50	7,75
Yearly consumption	224	35	56,84	58,80	60,76
Changes in the cost of currency change EURNOK from 7.50				1,96	3,92

The indirect exchange rate exposure is not considered an embedded derivative since electricity prices are denominated in EUR. The exposure is taken into account when calculating the net foreign currency exposure for the group.

The table below shows the sensitivity to changes in the price level for el.terminer at Nasdaq OMX. The starting point in secured volume per 31.12.2012 and provided that the price curve for futures contracts changed with 1 EUR / MWh.

Amount in NOK million	Secured	Sensitivity	EURNOK		
	volume in MWh	in EUR 1.000	7,50	7,75	8,00
Hedging according to IAS 39 relating to own use (consumption in Norway)	129 537	129,54	0,94	0,97	1,00
Hedging where market value are recognized according to IAS 39	199 920	199,92	1,45	1,50	1,55
Total	329 457	329,46	2,39	2,47	2,55

5.1.5 Liquidity risk

Liquidity risk is risk that the company will run into difficulties in fulfilling obligations connected with financial commitments that are settled with cash or another financial asset.

The group's foreign capital financing consists of two long-term drawing facilities with ceilings of NOK 1,050 million, which expires in May 2015, and NOK 300 million, which expires in May 2016. The loan agreements include normal default clauses with regard to equity, net equity value and debt ratio. As at 31 December 2012, the group's key figures were better than the agreed levels. In addition to the long-term drawing facilities, the also group has unused available credit in its bank systems, amounting altogether to about NOK 240 million. Credit facilities that are renewed annually.

Long-term cash flow forecasts are prepared in connection with the strategy and budget process. The finance department monitors the use of drawing facilities against the long-term liquidity needs so as to ensure that the group has sufficient long-term financing.

Short-term cash flow forecasts are prepared in the different group companies and reported weekly to the group's finance department, which aggregates the forecasts and monitors the group's total forecast liquidity needs. Based on these forecast, the finance department ensures that the group has sufficient cash equivalents to meet operational obligations. Surplus liquidity is used to pay off long-term liabilities. Short-term investments are only made exceptionally.

As a result of seasonal variations in raw materials supplies and market activity, the group's working capital varies by NOK 300-400 million between the highest point in May/June and the lowest in November/December.

Accounts receivable	1.3	6.3
Total	61.1	55.8

5.1.6 Refinancing risk

Refinancing risk is the risk of difficulties arising in refinancing the group's long-term liabilities.

In accordance with the group's financial policy, the remaining time to maturity of financing shall be a minimum of 1 year.

The group bases its long-term financing on syndicated loans from a few selected financial institutions with which the group has cooperated closely for an extended period. The background to this is the significance of these financial institutions' focus on the mechanised wood industry, combined with industry competence and knowledge of risk profiles and seasonal and other fluctuations.

The present financing has been taken up with negative pledge declaration and default clauses linked with key figures on the balance sheet. The loan agreements do not contain any profit-related default clauses.

5.1.7 Credit risk

Credit risk arises in transactions with derivatives, bank deposits and financial institutions, as well as transactions with customers, including outstanding receivables and fixed agreements.

As a general rule, the group only enters into financial transactions with financial institutions that participate in the long-term financing of the group. None of these has a credit rating poorer than A with the major credit rating agencies. The group has corresponding principles in relation to bank deposits and investments.

In accordance with the group's financial policy, credit sales shall only occur against satisfactory security in the form of credit insurance or guarantees. The group's framework agreement for credit insurance has been drawn up with a third party that is acknowledged in the market and has a credit rating of A.

In some cases it is not possible to obtain satisfactory security for credit sales. A function has therefore been established for determining internal credit limits and follow-up of credit sales.

5.2 Risk in connection with asset management

The group's objectives for asset management are:

- Ensuring continued good operations for the group so as to give a satisfactory and predictable return for the owners
- Ensuring sufficient financial room for manoeuvre to achieve the established targets for growth
- Giving sufficient confidence in the foreign capital markets to keep capital costs low

The board's dividend policy is based on facilitating a predictable and satisfactory cash yield on investments made by Moelven's shareholders. The main rule of the group's dividend policy indicates a cash dividend corresponding to 50 per cent of profit after tax, assuming that considerations of the company's financial position and other capital sources are satisfactorily safeguarded.

The board's objective for equity ratio is a minimum of 40 per cent, a level that is appropriate in light of the economic fluctuations that have been seen in recent years. In addition, Moelven's operations have a seasonal requirement for working capital that cause great variations in the equity ratio.

The board has an objective of a debt ratio of 0.50 for a normal seasonal balance.

The debt ratio is arrived at by dividing net interest-bearing debt by equity.

Amounts in NOK million	2012	2011
Interest-bearing debt	1 237.0	1 109.4
Interest-bearing assets	25.8	25.5
Net interest-bearing debt	1 211.3	1 083.9
Total equity	1 543.6	1 540.0
Liabilities / equity	0.78	0.70

Note 6 - Operating segments

6.1 – Main figures for the group and operating segments

Criteria for division

The divisions are divided in accordance with Moelven's three core activities: Timber, Wood and Building Systems. There is also a division named "Other" in which the remaining units are placed. The divisions are built up around independent subsidiaries with activities clearly defined within the divisions. All transactions between the divisions are conducted on normal commercial terms. The split into divisions differs from the formal legal ownership structure.

Group management represents the group's decision maker. The operating segments are based on the reporting; group management controls and assigns resources and assesses profitability.

The segments are divided in accordance with who the customers are. Timber has mainly industrial customers, Wood has mainly end users and building product chains as customers and Building Systems has customers in the contracting sector. The others are the remaining companies, mainly the parent company, timber supply and bioenergy.

In Timber and Wood especially, there is a great deal of collaboration between segments, but there are internal transactions between all four segments. Transactions between the segments are agreed on the arm's length principle. Income from customers outside the segment is reported to group management according to the same principles as the consolidated income statement.

Group management is mostly focused on the following key figures: Sales income, operating profit, net operating capital, employed capital and returns on employed capital, interest-bearing debt and investments.

The accounting principles that form the basis for segment reporting are the same as those used for consolidated accounting and are described in note 3.

Principal figures	Group		Timber		Wood		Building Systems		Other

Note 10 b – Impairment test of goodwill

As at 31.12.2012 goodwill in the group entered on the balance sheet amounted to NOK 16.9 million. This is mainly linked to the acquisitions of Sør-Tre Bruk AS, Granvin Bruk AS and Eco Timber AS that were completed in 2010 (see note 8). These three acquired companies are all in the Wood division and it is the division's operation that is deemed to be the cash flow generating group that goodwill shall be tested against.

Amounts in NOK million

	2012	2011
Book value of goodwill:		
Sør-Tre/Granvin/Eco	13.3	13.3
Other units	3.6	3.6
Total	16.9	16.9

Goodwill is tested at the level monitored by group management, which means that there are groups of cash flow generating units (CGUs).

The recoverable amount is determined based on a review of the division's use. Value is calculated by discounting the expected future cash flows after tax, discounted at an appropriate discount rate after tax that promotes maturity and risk.

Projection of cash flows are based on budgets approved by management for the first five years. Cash flows are determined based on historical figures, but where there is an implied expectation of moderate growth in the overall market, our market share and prices of our products. In management's opinion, this is reasonable to assume when there is a significant development of new products and technologies in these areas. Net expected improvements in operating margins. When it comes to assets and production capacity, the management believes that these have a capacity that could handle future growth. After five the estimate is a conservative estimate of 2.5% nominal growth in net cash flows. In the terminal period, investments and depreciation are set equal.

It is calculated as a weighted rate of return of 9.0%. This is based on a risk free rate of 2.1%, a risk premium of 6.5%, an equity beta of 1.2 and a liquidity premium of 3.0%. In addition, this is weighted towards the long-term interest rate that is 5.0% before tax and 3.6% after tax.

There was no write down of goodwill in either 2012 or 2011.

The maximum exposure to potential impairment of goodwill is probably 16.9 million, we have calculated the sensitivity for the impairment assessments and a 1% change in the discount rate alone would result in the entire goodwill to be written down.

Segments - Groups of cash flow generating units (CGUs):

Amounts in NOK million	2012		2011	
	Goodwill at year end	Impairment	Goodwill at year end	Impairment
Timber	0.0	0.0	0.0	0.0
Wood	13.3	0.0	13.3	0.0
Building Systems	3.6	0.0	3.6	0.0
Total goodwill	16.9	0.0	16.9	0.0

Note 11 a - Payroll expenses

Amounts in NOK million	2012	2011
Payroll cost	1 347.5	1 263.8
Social security cost	311.0	277.5
Pension costs - contribution-based pension schemes	41.4	40.0
Pension costs - defined-benefit pension schemes	27.2	24.6
Total	1 727.1	1 605.9

Social security cost in 2011 is calculated based on rate social security cost / payroll cost in 2012

11 b Average number of employees

Average number of employees in 2012 was 3.428 and in 2011 it was 3.376. Moelven had 3.375 employees at the end of 2012 compared to 3.482 employees at the end of 2011.

11 c Remuneration to auditor

Amounts in NOK million, paid during the financial year	2012	2011

Other changes	5.1	0.0	5.1	-5.3	0.0	-5.3
Other income and expenses during the period (after tax)	58.0	-18.1	39.8	-54.8	13.7	-41.1

Note 14 – Deferred tax

Deferred tax benefits and deferred tax are netted when there is a legal right to give and receive group contribution between the entities.

The table below shows the basis that has resulted in recognised deferred tax benefits and deferred tax.

Amounts in NOK million	2012	2011
Temporary differences		
Asset reserves	0.1	-6.8
Inventory	34.3	28.0
Cost provisions	4.5	-18.3
Other short-term temporary differences	-69.7	-5.0
Sub-total short-term differences	-30.8	-2.0
Fixed assets	156.6	252.5
Profit and loss account	6.3	6.0
Pension funds	0.0	4.5
Pension commitments	-108.5	-209.3
Other long-term items	269.8	188.0
Sub-total long-term items	324.2	241.7
Tax-assessed loss carry-forward.	-108.3	-63.3
Net temporary differences	185.0	176.5
Deferred tax asset	11.4	12.5
Deferred tax	42.8	56.5
Net deferred tax	31.5	44.0

14.2 Assets with deferred tax from loss carry-forward

Amounts in NOK million	2012	2011
Norway	16.6	15.7
Sweden	9.2	0.0
Denmark	1.7	1.8
Total deferred tax benefit from loss carry-forward	27.6	17.5

The group has a total of NOK 108.3 million in loss carry-forward as at 31.12.2012. NOK 29 million of this is from Norwegian companies with an ownership holding of more than 90%. The group will make use of this loss carry-forward in future group contributions. NOK 30.4 million of the total loss carry-forward refers to a Norwegian company where the ownership holding is below the limit for group contributions. The management of this company is in the process of reviewing possible production measures to improve profitability. NOK 42.0 million refers to Swedish companies who own 100%. The final part of the loss carry-forward, NOK 7.0 million, refers to Denmark. Here, management has initiated measures to improve profitability and it is believed that the company will be able to generate future taxable surpluses equivalent to the deferred tax benefit over a 3-5 year period; see also note 31.

14.3 Analysis of deferred tax through the year

	2012	2011
Net deferred tax obligation 1 January		
Included on income statement	44.0	85.7
Other income and costs pensions	-39.2	-45.3
Included in equity	18.1	13.7
Translation differences and other	8.5	-10.1
Net deferred tax obligation 31 December	31.5	44.0

		51.1	45.5	267.1	-3.7	2.6	

1) This company has a different financial year; date of balance is 31 August. The 4-month result would be insignificant for the Moelven group. No interim balance has therefore been made.

2) The company has not issued their annual report for 2012. The value is written off to zero so the result reflects this impairment.

Note 17 – Inventory

Amounts in NOK million	2012	2011
Raw materials and purchased semi finished goods	490.3	533.0
Goods in processing	153.3	131.2
Finished own products	644.3	676.7
Prepayments to supplier	2.1	3.0
Total inventory	1 289.9	1 343.9

Amounts in NOK million		
Inventory valued at acquisition cost	881.5	993.5
Inventory valued at fair value.	408.4	350.5
Total inventory	1 289.9	1 343.9

Write down of inventory to fair value in 2012 is included in profit and loss with NOK 9.3 million.

The book value of inventories pledged as security in 2012 was NOK 26.4 million and NOK 18.3 million in 2011.

Note 18 - Accounts receivable and other receivables

Amounts in NOK million	Note	2012	2011
Accounts receivable			
Accounts receivable gross		892.9	951.2
Provision for loss on accounts receivable		-3.8	-4.7
Earned not invoiced	19	118.1	76.9
Accounts receivable entered on the balance sheet		1 007.2	1 023.5
Losses on receivables on income statement			
The year's confirmed losses on receivables		1.9	1.7
Changes in provision for loss		-0.9	-0.2
Losses on receivables on income statement		2.8	1.9
Other receivables			
VAT in credit		68.7	80.9
Other receivables		184.3	110.6
Total other receivables		253.0	191.5

Part of the outstanding receivables is secured in the form of bank guarantees or other forms of security. There is not considered to be any credit risk associated with public sector customers. Refer to note 5 on financial risk.

Other receivables consist of other deferred income, prepayments and operations-related items. The groups accounts receivable are mainly secured through credit insurance.

Currency breakdown of accounts receivable before provision for loss

Amounts in NOK million	2012	2011
NOK	443.8	497.7
SEK	330.9	377.7
EUR	64.5	35.8
DKK	20.5	16.5
GBP	28.1	21.5
Other currencies	5.1	1.9
Total	892.9	951.2

Age distribution of outstanding accounts receivable

Amounts in NOK million	2012	2011
Accounts receivable within credit terms	640.1	480.6
Under 30 days beyond due date	209.8	411.8
31 to 60 days beyond due date	18.0	19.2
61 to 90 days beyond due date	11.8	20.7
91 to 180 days beyond due date	2.5	15.0
Over 180 days beyond due date	10.7	3.8
Total	892.9	951.2

Note 19 – Projects in progress

Amounts in NOK million

	Note	2012	2011
Distribution of sales			
Project sales		1 994.9	1 824.3
Service contracts		260.8	189.0
Sale of goods		602.2	726.0
Total		2 857.8	2 739.3
Projects in progress entered on the income statement *)			
Accumulated income		1 282.8	1 170.5
Accumulated accrued expenses		1 121.6	1 003.5
Accumulated contributions		161.2	167.1
Loss projects in progress **)			
		19.7	38.0
Earned not invoiced income	18	118.1	76.9
Prepayments from customers	25	73.7	73.1
Deferment of costs (+ liability/ - receivable)		40.2	20.5

*) Projects in production, not handed over to customer

**) Anticipated losses on these projects have been entered on the income statement

For projects that are directed by outside companies, invoicing is performed monthly with 30 day payment terms. Invoicing is normally done in line with the completion of the work, but there are also payment schedules that do not correspond to progress.

For projects, both income and costs are scheduled. Income that has been earned but not yet invoiced is entered under the item "Completed, not invoiced". Invoiced income that has not yet been earned (forward payment plans) is entered under the item "Prepayments from customers" under other short term liabilities; see note 25.

Only one of these items is used per project. Thus each project shows either a net receivable for the customer or a net liability to the customer.

Scheduling of costs (accrued, not entered) is recognised as trade accounts payable, while provisions for claims activities on concluded projects are entered as claims provisions etc.

Note 20 - Cash and cash equivalents

Amounts in NOK million	2012	2011
Bank deposits 31.12.	25.8	25.5
Unused drawing rights 31.12	487.1	590.3
Restricted bank deposits	0.0	0.0
Cash and cash equivalents 31.12	512.9	615.8

In the cash flow analysis, only changes in bank deposits have been taken into account in calculating liquidity changes during the period.

Note 21 - Earnings per share and equity per share

Earnings per share

Earnings per share is calculated by dividing the share of the annual profits allocated to the company's shareholders by a weighted average of the number of ordinary shares issued over the year, less own shares.

	2012	2011
Annual profit assigned to Moelven's shareholders	-34.4	-83.2
Average number of shares	129.5	129.5
Earnings per share	-0.27	-0.64

Equity per share

Equity per share is calculated by dividing the share of equity assigned to the company's shareholders by a weighted average of the number of ordinary shares issued over the year, less own shares.

	2012	2011
Total equity assigned to owners of parent company	1 534.5	1 526.7
Average number of shares	129.5	129.5
Equity per share	11.8	11.8

Note 22 – Group companies

The following companies are included in the Group. The list is group according to division structure. Book value shows the bookvalue in the separate financial statement of the owner of the company.

Note 23 - Pension costs and pension commitments

Pension schemes

The pension funds and commitments on the balance sheet mainly relate to the group's Norwegian companies.

The group's defined benefit scheme was closed in 2005 and relates entirely to Norwegian employees. The defined benefit scheme has a pension coverage of about 60% of final pay at age 67 and a full earning period of 30 years. All new employees in Norway join a contribution based pension scheme. The contribution scheme has a risk coverage with disability of about 60 per cent (with paid-up pension) and is a solution that is better than the statutory minimum pension solution. Over half of the group's employees are now part of the contribution based scheme.

The group is required to have an occupational pension scheme by legislation on compulsory occupational pensions. The pension schemes fulfil the requirements of this legislation.

Secured schemes

For some of the group's secured pension schemes, the pension funds are greater than the pension commitments. The over-financing in these schemes is judged to be applicable in accordance with legislation on company pensions.

Unsecured schemes

Unsecured schemes mainly relate to contractual pension (AFP) and are calculated in accordance with the Norwegian accounting standard on pension costs. It was decided to wind up the old AFP scheme in 2010. As a result of the change in legislation, AFP commitments were reduced by about NOK 25 million in 2010. There are no unsecured pension commitments that have not been included in the calculation mentioned above.

The new AFP scheme was established by an agreement between the Confederation of Trade Unions (LO) and the Confederation of Norwegian Enterprise (NHO) on 2 April 2008, as part of the wage settlement. The agreement was on the assumption that the state should contribute so that

the pension level (total of National Insurance and the new AFP) would at least correspond to the level of the old AFP. The scheme was established by the regulations for the joint scheme for contractual pensions (AFP). The new AFP is calculated as a lifelong supplement to the retirement pension from National Insurance, with the opportunity to combine pension and work income without reduction of pension. The new AFP scheme in the private sector has been established as a joint scheme by combining the three schemes (LO, Spekter financial services industry). The new AFP scheme is defined as a defined-benefit multi-employer plan in an accounting context. The company has given its employees a promise of a lifelong pension at a fixed level.

There is not yet sufficient information for a calculation to be completed.

The new AFP will be financed through an annual premium determined as a percentage of pay between 1 and 7.1 G (the annually fixed basic amount). The premium for 2011 is fixed at 1.4% and for 2012 at 1.75%. The premium is equal to the pension costs.

The group's foreign companies

Many of the group's foreign companies offer their employees pensions based on agreed individual contribution-based pension schemes.

In Sweden, most employees are covered by a collective occupational pension agreement. The scheme is defined as a multi-employer plan. Salaried staff born before 1979 are included in an individual occupational pension scheme that is also defined as a defined benefit plan. Because of the difficulty of reliably measuring the benefit level of these plans, there is insufficient information on an individual basis to enter the plans in the accounts as defined benefit schemes. The plans are accounted for as if they were contribution-based, in accordance with good accounting practice. Salaried staff born after 1979 are included in an occupational pension scheme that is premium based and is therefore treated in the accounts as contribution-based.

23.1 – Economic and actuarial assumptions

The following economic assumptions have been made:

	2012	2011
Return on pension funds	4.0 %	4.8 %
Discount rate	3.8 %	3.3 %
Annual pay increase	3.5 %	4.0 %
Annual G adjustment (National Insurance Scheme's amount)	3.3 %	3.8 %
Annual adjustment of pensions being paid	1.8 %	2.5 %
Average employer's contribution factor	14.1 %	14.1 %

23.2 - Pension commitments entered in the accounts

Amounts in NOK million	2012	2011
Present value of the secured pension commitments	414.7	459.3
Present value of the unsecured pension commitments	34.6	47.4
Total present value of pension commitments	449.3	506.7
Fair value of pension funds	-335.5	-324.6
Employer contribution of net pension commitments	15.5	24.4
Net pension liability outside Norway	-0.4	-1.2
Pension commitments entered	129.0	205.3

23.3 – Pension costs

Amounts in NOK million	2012	2011
Pension entitlements accrued in the year	17.9	16.2
Interest costs on the pension commitments	16.3	17.8
Anticipated return on pension funds	-15.7	-15.5
Plan changes and reductions entered on the income statement	-0.2	-0.5
Administration costs	2.5	3.6
Employer contributions	2.8	3.0
Pension costs secured and unsecured defined benefit schemes	23.6	24.6
Contribution pension costs and other pension costs	45.0	40.0
Pension cost (net) entered on the income statement	68.6	64.6
Of which, the pension cost for contractual pensions (AFP)	1.0	1.6

23.4 – Pension commitments and pension funds

Amounts in NOK million	Un-		2012		Un-		2011

Maturing under 1 year	26.3	31.1
Maturing 1-2 years	33.7	44.8
Maturing 3-4 years	8.6	3.1
Total	68.6	78.9
Power derivatives accounted according to IAS 39 as purchase for own use		
Maturing under 1 year	19.7	22.8
Maturing 1-2 years	21.5	29.3
Maturing 3-4 years	0.0	9.2
Total	41.2	61.3

The table shows the nominal gross value in NOK. Sales of foreign currency is sales against NOK and SEK. Calculation of nominal value in NOK is done by using the nominal value of SEK converted to NOK by using the balance sheet date rate. Kjøp av foreign currency are mainly sales of SEK against NOK and SEK against EUR. Power contracts are bought forward contracts for electricity.

26.3 Fair value levels

Level 1: Listed price in an active market for an identical asset or obligation

Level 2: Valuation based on observable factors other than listed price (used in level 1) either direct or indirect (derived from prices) for the asset or obligation.

Level 3: Valuation based on factors that are not obtained from observable markets. (non-observable assumptions)

26.4 Fair value measurements entered in the statement of financial position

The table below shows financial instruments at fair value according to the valuation method.

Three mandates relating Moelven is registered in the Company Register:

Stock exchange listing:

The Board is authorized to list its shares. The authorization is valid until May 2014.

Authorization capital:

The Board is authorized to increase the share capital by up to NOK 178 570 000, corresponding to 35,714,000 shares with a nominal value of NOK 5 per share. The authorization may only be used for capital increases carried out in connection with a public offering of its shares.

Acquisition of own shares:

The Board is authorized to acquire own shares. The maximum can be acquired 10% of the current share capital. The authorization is valid for a period beginning on the first day of listing of the shares with expiry 18 months after the General Meeting.

28.2 Declaration of determination of remuneration for the Group Executive Board

Background

In accordance with section 6-16a of the Public Limited Company Act, the board of Moelven Industrier ASA has prepared a declaration on the fixing of pay and other remuneration for senior executives within the group. The declaration, which was adopted by the general meeting of 24 April 2012, has been the guideline for the 2012 financial year. An identical declaration, which will be presented to the general meeting of 23 April 2013, will be the guideline for the 2013 financial year.

The following persons are involved

The declaration covers the group management of Moelven Industrier ASA. Group management means the CEO and the heads of the divisions.

General

Moelven shall have a level of pay and other terms of employment that is necessary in order to be able to keep and recruit managers with good competence and the capacity to achieve the objectives that are set.

Salary

Moelven's main principle is that senior executives shall have fixed salary. Salary is adjusted annually, normally with effect from 1 July.

Other benefits in kind

Moelven shall have other benefits, in the form of free car, free newspapers and free telephony for example, where this makes work easier and is

deemed to be reasonable in relation to general practice in the market.

Bonuses and other variable elements of the remuneration

Over and above the main principle of fixed pay, the board wishes it to be possible to offer other variable forms of remuneration in cases where this is found to be appropriate. Bonuses may be used to a limited extent and by special agreement and shall be directly dependent on operating profit.

Remuneration linked to shares etc.

Moelven has no form of remuneration for companies within the group that is linked to shares or the development of the share price, including shares, subscription rights and options. In the event of the establishment of such a scheme, it shall cover a large number of employees and such remuneration shall represent a smaller proportion than the fixed pay.

Pension schemes

Moelven shall have pension conditions that are on a level with the general market in the home country. New employees shall join contributory pension schemes.

Moelven shall facilitate freedom of choice for employees who have previously had defined-benefit pension schemes.

Pay after termination of employment

In the event of immediate termination of employment by the company, management shall as a standard be entitled to pay for 18 months, less pay earned by any new employer during this period.

The board reserves the right to deviate from these guidelines if there are serious grounds for doing so in individual cases. If the board should deviate from these guidelines, their reasons for doing so must appear in the minutes of the meeting.

Previous financial years

Management pay policy in previous financial years has been in line with the content of this declaration.

28.3 – Remuneration to senior executives etc.

Amounts in NOK 1,000 paid during the financial year

	Salaries	Pension costs	Other benefits
Remuneration to:			
President and CEO Hans Rindal	2 458.3	341.8	18.4
Johan Padel, Managing Director Timber *	1 085.1	118.4	98.2
Ingmar Karlsen, acting Managing Director Timber 28.03.12 til 30.09.12 **	1 080.0	0.0	0.0
Ole Helge Aalstad, Managing Director Timber from 1.10.12	400.0	41.7	39.4
Bjarne Hønningstad, Managing Director Wood	1 556.3	160.0	147.3
Lars Atterfors, Managing Director Building Systems	1 491.8	404.2	48.9
Total	8 071.5	1 066.1	352.2

*) Johan Padel chose to start with a competitor of Moelven and the salary reflects the period during dismissal time where he did not worked for Moelven

**) Ingmar Karlsen was hired and the amount was invoiced.

On termination of employment, the President and CEO and the Managing Directors of Timber and Wood have 18 month's pay after termination, less pay from new position/employer. The Managing Director of Building Systems has a similar agreement for 12 months.

28.4 - Remuneration to the board and corporate assembly

Amounts in NOK 1,000 paid during the financial year

	2012	2011
Remuneration to the board of Directors	953.7	908.8
Remuneration to the corporate assembly	259.0	287.8

The chairman of the board of directors receives NOK 290.000 and the board members NOK 110.000 in annual remuneration. Deputy members of the board receive NOK 5.500 per meeting.

The chairman of the corporate assembly receives NOK 100.000 in annual remuneration. The members and deputy members of the corporate assembly receive NOK 5.500 per meeting.

Note 29 - Shareholders' agreement and related parties

29.1 Shareholders' agreement

The share capital of Moelven Industrier ASA consists of 129,542,384 shares with a face value of NOK 5 and there is only one share class. In total the shares are distributed among 957 shareholders, of which the seven largest, Eidsiva Vekst AS, Felleskjøpet Agri BA through the company Agri MI AS and the forest owner cooperatives Glommen Skog BA, Mjøsen Skog BA, Havass Skog BA, AT Skog BA and Viken Skog BA, control a total of 99.6 per cent. There is a shareholders' agreement between these shareholders. Among other things, this shareholders' agreement has clauses that determine that the company shall be run as an independent unit with a long-term perspective and with continued focus on Scandinavia as the main market. The agreement also contains clauses regarding the composition of the board, dividend policy, strategic focus areas and share transfer.

29.2 Related parties

Transactions with the owners are performed in some areas of the ordinary activities. Among other things, this relates to purchase of timber, where the Norwegian forest owner cooperatives are suppliers. There will also be deliveries of biofuel from the Moelven group to a bioenergy plant owned by Eidsiva Energi AS, with possible buy-back of bioenergy for Moelven's industries in connection with the energy plant. Also, Eidsiva Energi Marked AS sells electric power to Moelven's Norwegian industrial operations. All these transactions have in common that the arm's length principle shall be applied. Where other suppliers can offer better prices or terms, these will be used. About 40 per cent of Moelven's total purchasing requirement for timber of 4 million cubic metres comes via the Norwegian forest owner cooperatives. Moelven's supply of energy raw materials to Eidsiva's bioenergy plant represents between 40 and 50 GWh on an annual basis, while buying back energy represents between 20 and 30 GWh. Net delivery of energy raw materials is 20 GWh.

The extent of the sale of electrical power corresponds to about 40 per cent of Moelven's total consumption of 185 GWh.

Moelven has a long tradition of running its operations in accordance with all the laws and ethical guidelines of the industry and is of the opinion that competition is positive for all parties in industry. In order to ensure that this culture is maintained, ethical guidelines and guidelines for complying with legislation on competition have been devised.

Note 30 – Subsequent events

No subsequent events have taken place that should have any effect on the 2012 annual report.

Corporate governance

Corporate governance at Moelven is based on the Norwegian recommendations for corporate governance of October 2012. The recommendations are available on www.nues.no

The list below gives references to where the points required by section 3-3b of the Norwegian Accounting Act may be found.

Requirements in accordance with section 3-3b of the Norwegian Accounting Act	Reference to Report on corporate governance at Moelven
1: A statement of the recommendation and regulations on corporate governance that the company is comprised of or otherwise chooses to follow.	Introduction to the report Point 1 Report on corporate governance
2: Information about where the recommendations and regulations mentioned in No. 1 are publicly available.	Point 1 Report on corporate governance
3: Reasons for any deviations from the recommendations and regulations mentioned in No. 1	There are two deviations from the recommendations. These are described in points 7 and 9.
4: A description of the main elements in the company's, and for accountants who prepare consolidated accounts also the group's, systems for internal control and risk management connected to the accounts reporting process.	Point 10 Risk management and internal control
5: Clauses in the articles of association that wholly or partly extend or deviate from the provisions of chapter 5 of the Public Limited Company Act.	No such clauses exist. The articles of association are included as an appendix.
6: Composition of the board, corporate assembly, supervisory council and audit committee, any working groups for these bodies, as well as a description of the main elements of prevailing instructions and guidelines for the work of these bodies and any working groups.	Point 8 Corporate assembly and board, composition and impartiality. Point 9 The work of the board
7: Clauses that regulate the appointment and replacement of board members.	Point 8 Corporate assembly and board, composition and impartiality.
8: Clauses and authorities that enable the board to decide that the company shall buy back or issue own shares or capital certificates.	Point 3 Share capital and dividends

1. Report on corporate governance

In accordance with the Public Limited Company Act

it is the board of the company that is responsible for ensuring the proper organisation of the business and administration of the company. The Moelven

group has a decentralised organisational structure with a number of independent juridical units with their own boards that have corresponding responsibility for the unit in question. The groups activities are based on Scandinavian values. The basic values sustainability, reliability and using the opportunities that arise have become over time a natural part of the company

culture. They also form the basis of the company's guidelines regarding corporate responsibility, ethics, anti-corruption, HES, staff regulations etc. A complete listing of the guidelines approved by the Board of Directors is presented under point 10.

2. Business activities

In accordance with the company's articles of association, the company's purpose is fabrication and activities that are associated with this, trade and other financial activities, as well as participation in other companies by means of share subscription and other means. The board emphasises long-term, sustainable development and lays down in the group's strategic plan that the main focus in future shall be the improvement of existing activities. The group has passed the critical size that is necessary to assert itself in competition. Quality shall be prioritised ahead of size and is an essential basis for both profitability and further growth. Both solidity and financing are satisfactory and give the necessary room for manoeuvre. The company's objectives and main strategies are described in the board's annual report.

3. Capital and dividends

At the end of 2012, equity in the parent company Moelven Industrier ASA was NOK 936.5 million (NOK 849.0 million). For the group as a whole, equity was NOK 1,543.6.0 million (NOK 1,540.0 million). The equity ratio was 35.8 percent (35.6 percent). The board's objective is a minimum of 40 per cent, a level that in the opinion of the board is appropriate in light of the economic fluctuations that have been seen in recent years. The board has adopted a dividend policy that is in line with the provisions of the shareholders' agreement between the company's seven largest owners, who together represent 99.6 per cent of all shares. The main rule of the dividend policy indicates a cash dividend corresponding to 50 per cent of profit after tax, assuming that considerations of the company's financial position and other capital sources are satisfactorily safeguarded.

At the annual general meeting on 24 April 2012, the Board was given the following authority:

- Pursuant to the Public Limited Liability Company Act Section 10-14, the Board of Directors is authorized to increase the company's share capital by up to NOK 178,570,000, corresponding to 35,714,000 shares with a nominal value of NOK 5 per share. The authorization may only be used

for capital increases carried out in connection with a public offering of the company's shares. The shareholders' rights to the new shares under the Public Limited Liability Companies Act Section 10-4 may be waived. Authorization does not include capital increases against contribution in kind pursuant to the Public Limited Liability Companies Act Section 10-2 or decision of merger pursuant to Section 13-5 It is for the Board to determine the issue price. The authorization is valid until 24 April 2014.

- In accordance with the Public Limited Liability Companies Act Section 9-4, the Board is authorized on behalf of the Company to acquire up to 12,954,128 own shares with a total nominal value of up to NOK. 64,770,640 representing 10% of the current share capital, adjusted for 1,100 own shares held per the annual general meeting date of 24 April 2012. The maximum amount that may be paid per share is NOK 30 and the minimum amount is NOK 5. Acquisition and transfer of own shares may take place as the Board considers appropriate, but not by subscription of shares. The authorization is valid for a period beginning on the first day of listing of the shares with expiry 18 months after the date of the annual general meeting.

4. Equal treatment of shareholders and transactions with related parties

The share capital of Moelven Industrier ASA consists of 129,542,384 shares with a face value of NOK 5 and there is only one share class. The company is not listed on the stock exchange. In total, the shares are distributed among approximately 960 shareholders. The seven largest shareholders Glommen Skog SA (25.1 per cent), Eidsiva Vekst AS (23.8 per cent), Agri MI AS (15.8 per cent), Viken Skog SA (11.9 per cent), Mjøsen Skog SA (11.7 per cent), AT Skog SA (7.3 per cent) and Havass Skog SA (4.0 per cent) together control 99.6 per cent. Most of the remaining 0.4 per cent is owned by private individuals. A shareholders' agreement has been entered into between the seven largest shareholders. Among other things, this determines that the company shall be run as an independent unit with a long-term perspective and with continued focus on Scandinavia as the main market. The agreement also contains clauses regarding the composition of the board, dividend policy, strategic focus areas and share transfer. Transactions with the owners are performed in some areas of the ordinary activities. Among other things, this applies to purchase of timber, where the Norwegian forest owner associations are suppliers. Of the total annual purchase of four mill m² sub, approximately 40 per cent comes from the forest owner associations that also are shareholders. There are also deliveries of biofuel from the Moelven group to a bioenergy plant owned by

Eidsiva Energi AS. Eidsiva Energi Marked AS trade electric power to Moelven's Norwegian industrial operations. External market prices are observable, and all these transactions are performed on the arm's length principle. Where other suppliers can offer better prices or terms, these prices will be used.

Moelven' supply of energy raw materials to Eidsiva's bioenergy plant represents between 40 and 50 GWh on an annual basis, while buying back energy represents between 20 and 30 GWh. Net delivery of energy raw materials is 20 GWh.

The extent of the sale of electrical power corresponds to about 40 per cent of Moelven's total consumption of 185 GWh. Moelven has a long tradition of running its operations in accordance with the laws and ethical guidelines of the industry with the opinion that competition is positive for all parties in industry. In order to ensure that this culture is maintained, ethical guidelines and guidelines for complying with legislation on competition have been devised.

5. Free marketability

The articles of association do not place any form of limitation on trading in the company's shares. The shares may be freely traded to the extent that individual shareholders have not made undertakings to other shareholders. Since the company is not listed and the seven largest shareholders together own 99.6 per cent of the shares, there is little trading in shares.

6. Annual general meeting

The notice of the general meeting, the content of the notification and accessibility of documentation follow the requirements set by the Public Limited Company Act and the regulations on general meetings.

Facilitation is made for the general meeting to be able to vote for every single candidate to be elected by the shareholders to the corporate assembly. The employees of the group hold their own election of employee representatives on the corporate assembly. The chairman of the board, the chairman of the corporate assembly and the auditor attend the general meeting. Traditionally, the chairman of the corporate assembly has been elected to chair the general

meeting. The procedures for attending and voting by proxy are described in the notification. Since 99.6 per cent of the shares are controlled by the seven largest shareholders, there has not be a need to appoint a person who can vote for the shareholders as a proxy.

7. Nominating committee and compensation committee

The annual general meeting annually elects a nominating committee consisting of four representatives of the shareholders and adopts guidelines for the nominating committee's work. Since 99.6 per cent of the shares and the employees are represented in the Corporate Assembly, there has not been a need to establish routines for ensuring the nominating committee's independence from the board, leading employees

and the Corporate Assembly.

The nominating committee submits its proposals:

- to the annual general meeting regarding the election of shareholder-elected members and deputy members to the Corporate Assembly and remuneration to the members and deputy members of the Corporate Assembly.
- to the Corporate Assembly regarding the election of the chairman and deputy of the Corporate Assembly.
- to the Corporate Assembly regarding the election of the chairman and deputy of the Board of Directors.
- to shareholder-elected members of the Corporate Assembly regarding election of shareholder-elected members and deputy members to the Board of Directors.

The proposals must include information about the candidates' expertise, capacity and impartiality. The guidelines for the nominating committee specify that the governing bodies must be composed based on an overall assessment of the company's need for expertise, capacity and balanced decisions that safeguard the interests of shareholders.

The remuneration committee consists of the nominating committee, complemented by a representative designated by the employee-elected members of the Corporate Assembly. The remuneration committee submits a proposal to the Corporate Assembly regarding stipulation of remuneration for the Board of Directors. Remuneration to the Board and Corporate Assembly shall not be performance-based.

8. Corporate assembly and board, composition and impartiality.

The corporate assembly has 12 members, four of whom are elected by the employees. The company's seven largest shareholders, who together control 99.6 per cent of the shares, are all represented in the corporate assembly. The board members of Moelven Industrier ASA are elected by the corporate assembly, normally for 1 year at a time. The board has seven members, five are representing the shareholders and two are employee representatives. In addition, the employees also elect one deputy representative, who attends board meetings. The Chairman of the Board of Directors is independent of the company's main shareholders. The four other shareholder-elected board members are connected with the company's main shareholders. The representatives of the employees are independent of the company's day-to-day management. The four other shareholder-elected board members are connected with the company's main shareholders. The representatives of the employees are independent of the company's day-to-day management. No senior executives are members of the board. Two of the five shareholder-elected board members are women. The proportion of female employees in the group is 11.5 per cent (11.7). The rules on gender

representation do not therefore apply to the employees' representatives. The composition of the board thereby satisfies the requirements regarding gender representation on the board. Apart from the employees' representatives on the board, only one board member receives remuneration other than directors' fees from the company. This is an insignificant amount and relates to winding up of an appointment in France. As a result of the guidelines for the work of the nominating committee, as described under point 7, the main shareholders are ensured a good knowledge of the board members' background and competence. Because of the ownership structure, publication of further information is not deemed to be relevant. From experience, non-attendance at board meetings is exceptional.

9. The work of the board of directors

The board's administration of the company follows the provisions of the Public Limited Company Act. Instructions have been determined for the board of Moelven Industrier ASA that give guidelines for the board's work. Every meeting reviews the monthly reporting of operational developments, financial data and HSE statistics for the group. There is also the following schedule of work for every calendar year:

- January: Report for fourth quarter of preceding year.
- February: Annual accounts with notes and annual report for preceding year.
- April: Report for first quarter and preparation for ordinary general meeting.
- June: Strategic plan; initial meeting.
- July: Report for first six months.
- August: Strategic plan.
- October: Report for third quarter, adoption of strategic plan.
- December: Business plan and budget for coming year, including risk management and internal control.

The Chairman of the Board of Directors is independent of the company's main shareholders. The Board has not addressed issues of material nature in which the Chairman is or has been engaged. According to the rules of procedure, the board members must not participate in the consideration or decision of issues that are of particular importance to themselves or to any related parties that must be considered to have major personal or financial interest in the matter. The same applies to the CEO. By related parties it is also understood companies in which the board member represents ownership interests. Self-evaluation of the work of the board is performed at the beginning of every year. The board uses committees as needed. Based on an assessment of risk conditions and the need for control, as well as ownership structure, it has been decided to let the complete board function as an audit committee. The board only determines remuneration for the President and CEO. Remuneration for the remainder of management is

determined by the President and CEO in line with guidelines adopted by the board. There are no option programmes or share-based payments for senior executives. The task of the board in respect of compensation is therefore limited and no separate compensation committee has been set up in the board. In addition to board members, the CEO, CFO and board secretary normally also attend normal board meetings. Other representatives of the administration, the divisions or auditor attend as needed.

The board has determined instructions for the work of the CEO. Group management consists of the CEO and the managing director of each division. In addition to group management, the directors of the group's shared services also attend group management meetings. For more information about governing bodies and group management, refer to the notes to the annual accounts.

10. Risk management and internal control

The Moelven group is built on a flat and decentralised organisational and management structure. All units within the group have individual profit responsibility and operate as independent parts of a coordinated network that is characterised by openness and cooperation. This helps to limit the need for central administrative resources and increases the group's ability to react quickly to what is happening around it. Risk management and internal control are suited to this organisational model. The local company management and the boards of the individual companies follow up on risk management and internal control in accordance with prevailing laws and regulations. There are also control functions at divisional and group level, as well as in individual companies where the nature of the business leads to increased risk of faults, non-compliance or irregularities.

Because of its extent, it has been decided to limit reporting to the board to a focus on group and divisional data, as well as selected key figures and non-compliance reporting by unit. In connection with annual strategy and budget activities, the board reviews the group's most important risk areas. If needed, and based on the annual risk assessment, the group's reporting and control routines are adapted so that identified risks can be satisfactorily covered. In addition to established internal rules and routines, the internal control is largely based on the internal control environment. This environment includes people at all levels of the company. It covers integrity, ethical values, competence, management philosophy, form of operation, organisational structure, distribution of responsibility and authority and personnel policy. The board and management place great emphasis on communicating the established basic position to risk management out in the organisation.

All units close their accounts monthly and report to the parent company on the third working day of the following month. Reporting occurs in accordance with standardised systems and common guidelines so as to ensure consistency and the greatest

possible comparability right across all units. An important control measure that follows naturally from the management and organisational model is the monthly benchmark and consolidated data report from the group to the reporting units. The same monthly report that is sent to the board is also sent back to company management in each individual company. In this way, many are involved in control and follow-up of management and governing data. The reporting cycle supports the feeling of responsibility, not just for the results of one's own unit, but also for the divisions and group as a whole. The board considers that this reporting and control environment gives satisfactory control of the business.

The board has reviewed and approved the following general guidelines:

- Instructions for the board and general manager of Moelven Industrier ASA
- Financial policy
- Dividend policy
- Guidelines for employees of the Moelven group, including the following guidelines
 1. Brand platform
 2. HSE manual
 3. Environmental policy
 4. Insurance and risk strategy - general insurance
 5. Staff regulations
 6. Policy for an open company culture
 7. Dealing with internal irregularities
 8. Policy on alcohol and drugs
 9. Data discipline instructions
 10. Policy for social media
 11. Brand and communication strategy
 12. Legislation on competition in a Moelven context
 13. Guidelines for internal pricing between companies

11. Remuneration to the board

Remuneration to the board is decided annually by the corporate assembly. The remuneration to board members is a fixed amount that is determined in advance and is independent of profits. No option or share based remuneration is used and neither are there any incentive schemes.

For further information about directors' fees and any remuneration other than fees to board members, refer to the notes to the accounts.

12. Remuneration to group executives

The board determines the CEO's salary. There are no option or share based payments. Principles and ceilings have been determined for profits-related payment within the group. Among other things, it has been determined that agreements of profits-related remuneration shall have a duration of a maximum of one year at a time and that such remuneration shall have an upper ceiling. For further information about remuneration to group management, refer to the notes to the annual accounts.

13. Information and communication

The board determines the group's financial calendar annually; this is published in the annual report and on the company's website. The group's quarterly and annual reports are primarily published on the internet, but are also sent by post on request. In addition to annual and quarterly reporting, selected key figures are published monthly on the company's website. The board has established a practice of organising annual owners' meetings so as to create an arena for the exchange of information and discussion between the owners. It has not been found necessary to establish guidelines for these.

14. Company takeover

The company is not listed and there is a shareholders' agreement between the seven largest shareholders, who together own 99.6 per cent of the shares, that regulates the transfer of shares, among other things. No guidelines have been prepared for the board in connection with any takeover bid.

15. Auditor

The auditor has meetings with the board without administration being present. The auditor also participates in board meetings when the annual accounts are discussed. The auditor also presents the audit plan, summaries following interim audits of the subsidiaries and central risk areas and the group's handling of these.

Cash holdings 31.12.	6	6.8	0.4

Note 1 Accounting principles

The annual accounts have been prepared in accordance with the provisions of the Norwegian Accounting Act and with generally accepted accounting principles.

1.1 Use of estimates

Management has used estimates and assumptions that have affected the income statement and the valuation of assets and liabilities, as well as uncertain assets and obligations on the date of balance in the preparation of the annual accounts in accordance with good accounting practice.

1.2 Foreign currency

Foreign exchange transactions are calculated at the exchange rate prevailing at the time of the transaction. Monetary items in foreign currency are converted to Norwegian kroner by using the rate of exchange on the balance date. Non-monetary items which are measured at historical exchange rates expressed in foreign currency are converted to Norwegian kroner by using the exchange rate at the time of transaction. Non-monetary items which are measured at fair value expressed in foreign currency are converted to the exchange rate determined at the time of measurement. Exchange rate changes are entered on the income statement as they occur during the accounting period under other financial items.

1.3 Operating revenues

The operating revenues consist mainly of division of joint costs among the subsidiaries. Sales are invoiced as the services occur.

1.4 Tax

Tax costs consist of payable tax and changes in deferred tax. Deferred tax/tax benefits are calculated on all differences between book and taxable values of assets and liabilities. Deferred tax is calculated at 28% of the temporary differences between the book and taxable values, as well as tax losses carried forward at the end of the reporting year. Net deferred tax benefits are entered on the balance sheet to the extent that it is probable they can be utilised.

Payable tax and deferred tax are entered directly against equity to the extent that the tax entries relate to equity items.

1.5 Classification and valuation of balance sheet items

Current assets and short-term debt include items which become due for payment within a year after the date of acquisition and items associated with the goods cycle. Other items are classified as fixed assets/long-term liabilities.

Current assets are valued at the lower of acquisition cost and fair value. Short-term debt is recognised on the balance sheet at the nominal amount at the time it is taken out.

Fixed assets are measured at acquisition cost, less depreciations and write downs. Long-term debt is recognised in the balance sheet at the nominal amount at the time of establishment.

1.6 Research & Development

Research and development expenses are entered on the balance sheet to the extent to which a future financial benefit can be identified that is linked to the development of an identifiable intangible asset and the expenses can be reliably measured. Otherwise, such expenses are recognised as costs on an ongoing basis. Development that is entered on the balance sheet is depreciated on a straight line basis over the financial lifetime. Research expenses are recognised as costs on an ongoing basis.

1.7 Tangible fixed assets

Tangible fixed assets are entered on the balance sheet and depreciated on a straight line basis over the asset's expected lifetime. Major assets that consist of significant components having different lifetimes are depreciated with different depreciation times for the different components. Direct maintenance of equipment is recognised continuously as an expense under operating expenses, while increased costs or improvements are added to the equipment's price and amortised concurrently. If the recoverable value of the asset is lower than book value, it is written down to recoverable value. Recoverable value is the higher of net sales value and value in use. Value in use is the present value of the future cash flow that the asset is expected to generate.

1.8 Subsidiaries/associated companies

Subsidiary and associated companies are assessed by the cost method in the company accounts. The investment is valued at acquisition cost for the shares unless write down has been necessary.

Write down to fair value is been done when the decrease in value is due to causes that cannot be considered to be transitory and where this must be considered necessary according to good accounting practice. Write downs are reversed when the reason for write down no longer exists.

Dividends, group contributions and other payments from subsidiaries are entered as revenue during the same year as provision is made for them in the subsidiary's accounts. If the dividend/group contribution exceeds the proportion of earned profit after the date of acquisition, the surplus represents part repayment of invested capital and is deducted from the value of the investment on the parent company's balance sheet.

1.9 Receivables

Trade accounts receivable and other receivables are recognised in the balance sheet at their nominal value after deductions for provision for expected loss. Provision for losses is made on the basis of individual assessment of each debt. In addition, an unspecified provision is made for the remaining trade accounts receivable to cover assumed loss.

1.10 Short-term investments

Short-term investments (shares assessed as current assets) are valued at the lower of acquisition cost and fair value on the date of balance. Dividends received and other payments from the companies are entered as other financial income.

1.11 Pensions

The company has collective, contribution-based pension schemes. These are schemes with a savings portion and a risk portion with earnings right. Pension premiums are entered as costs as they occur.

The collective contributory pension was established in 2005, and those who were members of the company's collective defined benefit pension plans had the option of changing. The defined benefit plans continue as closed schemes and no new members are included in these schemes. All new

employees enter the company's collective contributory pension. The closed schemes are defined benefit plans that give the employees entitlement to agreed future pension benefits. The benefits are based on the number of years of earning and pay level on retirement.

Defined-benefit pension schemes

Defined-benefit pension schemes are valued at present value of the future pension benefits that have been earned on the date of balance. Pension funds are valued at fair value.

Changes in defined-benefit pension commitments that are due to changes in pension plans are distributed over the estimated average remaining earnings period. Estimate changes and changes in financial and actuarial assumptions (actuarial gains and losses) are entered against equity (OCI). The period's net pension costs are classified as payroll and personnel costs.

The company entered all accumulated net actuarial losses and gains (estimated deviations) against equity as per 1 January 2010. This was done since the company began to use IAS 19 for accounting for pension commitments.

Gains and losses on the curtailment or settlement of a defined-benefit pension scheme are recognised on the income statement on the date the curtailment or settlement occurs.

Contributory pension scheme

In addition to the defined benefit scheme described above, the company has made contributions to local pension plans. Contributions are given to the pension plan for all employees and represent from 3% to 5% of pay. Pension premiums are entered as costs as they occur.

1.12 Cash flow statement

The cash flow statement has been prepared according to the indirect method. Cash and cash equivalents comprise cash, bank deposits and other short-term liquid investments.

Note 2 – Operating revenue

Amounts in NOK million	2012	2011
Subsidiaries' proportion of joint costs	27.0	25.3
Subsidiaries' proportion of IT services	32.8	30.7
Rent income - outside the group	0.8	0.5
Rent income - inside the group	3.1	3.2
Other	6.0	6.2
Total other operating income	69.7	65.9

Note 3 – Tax expense

Amounts in NOK million	2012	2011
Ordinary result before tax	79.8	-40.1
Nominal tax 28 %	22.3	-11.2
Tax effect of permanent differences	-24.1	0.2
Total tax costs	-1.8	-11.0
Ordinary result after tax	81.6	-29.1
Tax percentage	-2.3 %	27.5 %
Tax costs consist of payable tax in		
Total tax payable	0.0	0.0
Changes in deferred tax from income statement	-1.8	-11.0

Net interest-bearing debt		1 341.6	1 365.6

6.2 Repayment schedule long-term liabilities

Amounts in NOK million	2012	2011
<i>Long-term liabilities that fall due for payment in</i>		
1 year	0.0	0.0
2 years	0.0	0.0
3 years	776.8	0.0
4 years	285.5	739.3
5 years	0.0	287.0
6 years and over	0.0	0.0

6.3 Ceilings and withdrawals in syndicated loan market

Amounts in NOK million	2012	2011
Ceiling	1 350.0	1 350.0
Withdrawal	1 062.3	1 026.3
Remaining term in months	29/41	41/53

The loans have been taken with negative security declaration and have normal clauses relating to equity, equity ratio and debt ratio.

6.4 Future access to liquidity

Long financing

Amounts in NOK million

	2012	2011
as at 31.12	1 350.0	1 350.0
in 1 year	1 350.0	1 350.0
in 2 years	1 350.0	1 350.0
in 3 years	300.0	1 350.0
in 4 years	0.0	300.0
in 5 years	0.0	0.0
in 6 years or later	0.0	0.0

Short financing

In addition to the long-term access to liquidity, the group has loan facilities that are renewed each year. As at 31.12.2012 these were NOK 150 million., SEK 108,5 million, EURO 4 million, DKK 35 million and GBP 0,5 million, which altogether represent a total amount of NOK 266.6 million. As a result of normal seasonal variations, the group's net interest-bearing debt was at its highest in March 2012, NOK 1 361.4 million. The long term loan facilities as at 31.12.2012 are expected to be sufficient to cover liquidity needs for the coming three years and five months.

Note 7 – Financial market risk

Assets with associated financial market risk consist of loans in foreign currency to subsidiaries, mainly in SEK. Exchange rate exposure is eliminated in that the loans are financed with debts in the same currency. Interest rate risk connected with the same receivables and liabilities is reduced by using rate swaps.

In order to assist subsidiaries in covering risks associated with buying and selling currency, and within limits defined by the board, currency positions are taken for use with internal exchange.

Note 8 – Guarantee liabilities

Amounts in NOK million

Loan guarantees/financial guarantees	122.5	124.3
Unconditional guarantees	238.9	256.5
Tax deduction guarantees	47.3	41.8
Total	408.7	422.6

The company has no restricted bank deposits.

The company's cash credit accounts are included in the group's account systems.

The company can thus be collectively responsible for more than the company's withdrawals. The employees' tax deduction funds are secured with guarantees furnished by an external credit institution.

Note 9 – Financial instruments

The following types of hedging are used:

Rate swaps
 Currency future contracts
 Structured forward buying of currency
 Future contracts for electric power

	2012	2011
Financial assets entered at fair value		
Interest rate derivatives	0.0	0.0
Exchange rate derivatives	4.2	5.9
Total assets presented on the financial derivatives line	4.2	5.9

	2012	2011
Financial obligations entered at fair value		
Interest rate derivatives	48.5	41.7
Exchange rate derivatives	6.2	6.3
Power derivatives *)	14.4	16.4
Total obligations presented on the financial derivatives line	69.2	64.4

*) Power derivatives are entered on the lowest value principle in the parent company and with hedge accounting and deferred entry on the income statement in the group.

	2012	2011
Value changes of financial instruments recognised in the profit and loss account		
Value change financial instruments, gain	0.0	0.0
Value change financial instruments, loss	-4.9	-47.3
Net result of financial instruments	-4.9	-47.3

Fair value of hedging instruments and hedged items are set as follows:

The Group has no hedging instruments not traded in functional markets. Fair value is calculated based on observable market prices for similar instruments.

Nominal value of financial instruments

Other benefits/other personnel costs inc. proportion charged to	-0.2	-0.6
Total	37.2	34.6
Number of man years	44.0	44.0

Pension schemes

The group's defined benefit scheme was closed in 2005. The defined benefit scheme has a pension coverage of about 60% of final pay at age 67 and a full earning period of 30 years. All new employees join a contribution based pension scheme. The contribution scheme has a risk coverage with disability of about 60 per cent (with paid-up pension) and is a solution that is better than the statutory minimum pension solution. Over half of the company's employees are now covered by the contribution based scheme.

Unsecured schemes

Unsecured schemes are related to the contractual pension scheme (AFP) and other guaranteed pension commitments. These are calculated in accordance with IFRS on pension costs. It was decided to wind up the old AFP scheme in 2010. As a result of the change in legislation, contractual pension (AFP) commitments were greatly reduced in 2010 and somewhat reduced in 2011. There are no unsecured pension commitments that have not been included in the calculation mentioned above.

12.2 – Economic and actuarial assumptions

	2012	2011
Return on pension funds	4.00 %	4.80 %
Discount rate	3.80 %	3.30 %
Annual pay increase	3.50 %	4.00 %
Annual G adjustment (National Insurance Scheme's basic amount)	3.25 %	3.75 %
Annual adjustment of pensions being paid	1.75 %	2.50 %

12.3 – Pension costs

Amounts in NOK million	2012	2011
Pension entitlements accrued in the year	1.9	1.7
Interest costs on the pension commitments	2.3	2.5
Pension cost (gross)	4.2	4.2

To the Annual Shareholders' Meeting of Moelven Industrier ASA

INDEPENDENT AUDITOR'S REPORT

Report on the Financial Statements

We have audited the accompanying financial statements of Moelven Industrier ASA, which comprise the financial statements of the parent company Moelven Industrier ASA and the consolidated financial statements of Moelven Industrier ASA and its subsidiaries. The parent company's financial statements comprise the balance sheet as at 31 December 2012, the income statement and cash flow statement for the year then ended, and a summary of significant accounting policies and other explanatory information. The consolidated financial statements comprise the statement of financial position as at 31 December 2012, and the income statement and the statement of other comprehensive income, statement of changes in equity and cash flow statement for the year then ended, and a summary of significant accounting policies and other explanatory information.

The Board of Directors and the Managing Director's Responsibility for the Financial Statements

The Board of Directors and the Managing Director are responsible for the preparation and fair presentation of the parent company financial statements in accordance with the Norwegian Accounting Act and generally accepted accounting standards and practices in Norway and for the consolidated financial statements in accordance with International Financial Reporting Standards as adopted by the EU, and for such internal control as the Board of Directors and the Managing Director determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

Auditor's Responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with laws, regulations, and auditing standards and practices generally accepted in Norway, including International Standards on Auditing. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion on the separate financial statements

In our opinion, the parent company's financial statements are prepared in accordance with the law and regulations and give a true and fair view of the financial position of Moelven Industrier ASA as at 31 December 2012, and of its financial performance and its cash flows for the year then ended in accordance with the Norwegian Accounting Act and accounting standards and practices generally accepted in Norway.

Opinion on the consolidated financial statements

In our opinion, the consolidated financial statements are prepared in accordance with the law and regulations and give a true and fair view of the financial position of Moelven Industrier ASA and its subsidiaries as at 31 December 2012, and of its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards as adopted by the EU.

Report on Other Legal and Regulatory Requirements

Opinion on the Board of Directors' report and Report on corporate governance

Based on our audit of the financial statements as described above, it is our opinion that the information presented in the Board of Directors' report and Report on corporate governance concerning the financial statements, the going concern assumption, and the proposal for the allocation of the profit is consistent with the financial statements and complies with the law and regulations.

Opinion on Accounting Registration and Documentation

Based on our audit of the financial statements as described above, and control procedures we have considered necessary in accordance with the International Standard on Assurance Engagements (ISAE) 3000, «Assurance Engagements Other than Audits or Reviews of Historical Financial Information», it is our opinion that the management has fulfilled its duty to produce a proper and clearly set out registration and documentation of the company's accounting information in accordance with the law and bookkeeping standards and practices generally accepted in Norway.

Statement by the Corporate Assembly

The following items were discussed at the meeting of the Corporate Assembly held on 21 March 2013:

- Annual report and proposed Annual Financial Statement by the Board of Directors and President/CEO for the 2012 accounting year for Moelven Industrier ASA and group.
- Board's proposed allocation of profit for year in Moelven Industrier ASA.
- Board's determination of remuneration to Group Executive Board.

The Corporate Assembly recommends that the general meeting approve the Board of Directors and CEO's annual report and accounts for Moelven Industrier ASA and group in 2012, including allocation of the result for the year in Moelven Industrier ASA.

The Corporate Assembly also recommends that the general meeting approve the Board of Directors proposal for remuneration to corporate management.
